REPORT

TO

HIS EXCELLENCY GEORGE HENRY, EARL CADOGAN, K.G.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit, for your Excellency's consideration, the Thirty-second Annual Report on Marriages, Births, and Deaths in Ireland.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1895 number 23,120; the Births 106,113; and the Deaths 84,395. The marriage rate is considerably above the average rate for the preceding ten years, and is higher than the rate for any of those years; the birth rate and death rate each show a slight increase as compared with the corresponding averages for the ten years, or with the rate for 1894.

The recorded natural increase of population, or excess of births over deaths, was 21,718: the loss by emigration amounted to 48,703; there would thus appear to have been a decrease of 26,985 in the population during the year, but against a portion of this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,574,764.

TABLE I.—Showing for each of the years 1885–95, the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years 1885–94.

YEARS.	*Estimated* Population in the middle of each year.	Numbers *Registered*.			Number of Emigrants as returned by the Enumerators.	Rate per 1,000 of Estimated Population.

During the financial year ended 31st March last 617 cases were reported of offences against the Acts administered by this Department. On careful inquiry into the circumstances, in 155 cases prosecutions were ordered to be instituted against the offenders. In 81 of these the parties were convicted and punished; in 69 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law; in 4 cases the summonses were dismissed, and there is one case regarding which the result has not as yet been reported to this Office.

The cases dealt with included the following offences:—Neglect to register Births; neglect to register Deaths; neglect to furnish Certificate of Marriage; failure of Coroner to furnish Certificate of Inquest; giving false information as to age at death, as to cause of death, and as to duration of illness previous to death; giving false information as to Births, viz.—registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish Certificate of Cause of Death; falsifying extracts from Registers.

A general statement regarding the return of the various offences and the proceedings taken in connection therewith will be found at page 196.

MARRIAGES.

The number of Marriages registered during the year is 23,120, being equal to 5·05 per 1,000, of the estimated population,* a rate which is ·35 over that for the previous year, and ·59 above the average for the ten years 1885–94.

Of the 23,120 Marriages registered during last year 15,938 were between Roman Catholics; 3,817 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,461 were in Presbyterian Meeting-houses; 489 in "Registered Buildings" belonging to various religious denominations; only 400 by civil contract in the Registrars' offices; 10 were according to the usages of the Society of Friends; and 5 according to the Jewish rites.

The Roman Catholic Marriages are equal to a rate of 4·62 per 1,000 of the estimated number of Roman Catholics, being 0·39 over the corresponding average rate for the preceding ten years, and the other Marriages represent a rate of 6·38 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·52 over the corresponding average rate.

Of the 3,817 Marriages according to the rites of the Church of Ireland, 52 were by special licence, 3,255 by licence, 470 after the publication of banns, 9 on Registrar's certificate, and in 31 instances there was DO information afforded as to which of these methods was adopted.

* Throughout this Report the rates for the total of Ireland are based on the estimated population in the middle of the respective years, and the rates for Provinces and Counties are based on the population according to the Census, those relating to the years 1885–6 being founded on the 1881 population, and those having reference to the years 1887–95 on the population by the Census of 1891.

Printed image digitised by the University of Southampton Library Digitisation Unit

1895, . .	3,617	2,451	489	400	10	5	7,182	15,938	23,120	6·38	4·62	5·05

During the year 1895 there were issued by the Registrars 778 Licences for Marriage in Registered Buildings and in the Registrars' offices.

The number of Marriage Licences issued by the licensing Ministers of the several Presbyterian bodies is given in the following summary:—

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1895	Number of Registered Meeting-houses on 31st December, 1895.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland, ...	152	574	2,276
2. Remonstrant Synod of Ulster, ...	8	19	32
3. Presbytery of Antrim, ...	6	10	31
4. United Presbytery or Synod of Munster, ...	2	2	.
Total, ...	168	605	2,339

There being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics in Ireland, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may lawfully be solemnized without special licence, and from this it appears that, on the 31st December, 1895, there were 1,488 churches and chapels of the Church of Ireland, 605 registered Presbyterian Meeting-houses, and 379 "Registered Buildings" belonging to various religious denominations. Compared with the previous year, these numbers show an increase of 1 as regards the Church of Ireland, an increase of 1 in the number of Presbyterian Meeting-houses, and no change in the total number of "Registered Buildings."

The following statement shows the several religious bodies having "Registered Buildings" in 1895:—

Denominations.	No. of Places of Worship.
Methodists, . . .	227
Reformed Presbyterians, .	37
Independents, . . .	24
Baptists, . . .	23
Christian Brethren, . .	14
Moravians, or United Brethren,	9
Seceders, ...	9

Of the 23,120 marriages registered during the year 1895 there were recorded—in the first quarter 7,467; in the second, 5,021; in the third, 5,192; and in the last, 5,440.

Printed image digitised by the University of Southampton Library Digitisation Unit

T[illegible]elors and spinsters constitute 87·0 per cent. of the total; those of w[illegible]he marriages of *each* 8·2 per cent.; of bachelors and widows 2·9 per cent.; and of wid[illegible]widowers and *spinsters* per cent. Thus, 10·1 per cent. of the men married were wid[illegible]owers and widows 1·9 [illegible]f the women were widows; and in 13 instances in every 100 [illegible]owers, and 4·8 per *cent.* of marriages one *or both* of the contracting parties had been in the married state before.

TABLE V.—Showing by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1885–95, and the average number for the ten years 1885–94, distinguishing the number of Roman Catholic marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81:—

A complete registry of the exact ages of the persons married would be valuable from many points of view: hence it is matter for regret that in the great majority of instances the ages are not recorded. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1895 the ages of both parties were specified in 4,478 cases only, being less than one-fifth of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 23,120 men married during the year, 459, or 1·99 per cent., were minors; and of the women married, 2,006, or 8·68 per cent., were under age.

The highest proportion of husbands (2·44 per cent.) married under age in 1895, was in the province of Ulster, and in that province there was also the highest per-centage of wives (10·60), not of full age.

It may he added that the per-centage of persons married in Ireland who were under age is very far below the corresponding rates in England and Scotland.

The signatures of the contracting parties in the marriage registers or certificate, afford a rough test of the progress of elementary education. In the year 1895, 19,191, or 83·0 per cent., of the husbands, and 19,487, or 84·3 per cent., of the wives, wrote their names, and the remainder signed by marks.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

Thsse figures show a considerable improvement as compare[d] with the corresponding results elsven years since, the per-centage of persons m[arried] in 1885 who wrote their names being—men 76·5, and women 73·8.

Ths per-centages for the several provinces last year [were], for men, from 76 in Connaught to 86 in Leinster, and, for women, from 81 in Ulster and Connaught to 88 in Leinster.

In 1,781 cases both of the parties married signsd the register by "mark," and in 4,000 the register was thus signed by either the husband or the wife, so that in 5,781 cases, or 25·0 per cent. of the total number of marriages, ons or both of the parties signed by mark; and in 17,339, or 75·0 per cent., *both* parties wrote their names.

The number of marriages registsred in each of the eleven years 1885–95; the proportion per cent. of persons married who wrote their names in the registers; of minors, of widowers, and of widows are given in the following Table for Ireland, and for each of the four provinces.

TABLE VI.—Showing as regards the **Marriages** in Ireland and in each of the Four Provinces during the years 1885–95, the proportion per cent. of Persons who **signed their Names**, of Persons **not of Full Age**, and of **Re-marriages.**

Provinces, &c.		Signed their Names in Writing		Persons not of Full Age		Re-marriages.

Printed image digitised by the University of Southampton Library Digitisation Unit

In proportion to population at all ages, the registered marriages were most numerous in the province of Ulster, in which, however, the rate was only 5·7 per 1,000 of the population, according to the Census of 1891; Leinster comes next, with 5·4 per 1,000; Munster third, with 4·2 per 1,000; and Connaught last, the rate being 3·6 per 1,000.

The highest rate for any county was 8·1 per 1,000 of the population in 1891, which was the marriage rate for Antrim; and the lowest 3·1 per 1,000, for Queen's. Between these, the most favourable were 7·3 for Dublin, and 5·4 for Armagh, Down, and Wicklow; and the least so 3·3 for Clare, and 3·5 for Sligo.

BIRTHS.

The number of births registered during the year 1895 was 106,113—54,658 boys and 51,455 girls, or 106·2 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 43·1, or 23·2 per thousand, which is 0·3 over the average rate per 1,000 for the ten years, 1885–94.

Of the 106,113 children whose births were registered in Ireland during the year 1895, 103,242, or 97·3 per cent. were legitimate, and 2,871, or 2·7 per cent., were illegitimate: the average per-centage of illegitimate for the preceding 10 years also was 2·7. It is unnecessary to say that these results compare very favourably with the returns for most other countries.

Of the children born in wedlock during the year, 53,159 were males, and 50,083 females, being 106·1 of the former to every 100 of the latter, and of the illegitimate children 1,499 were males, and 1,372 females, or 109·3 boys to 100 girls.

Comparing the provinces, we find that the per-centage of children born in Ulster, who were illegitimate, was 3·9; in Leinster, 2·5; in Munster, 2·3; and in Connaught, 0·7.

TABLE VII.—The Per-centage of Legitimate and of Illegitimate Births registered in Ireland during the years 1891–95, by Provinces.

Provinces	Proportion per cent. of Legitimate Births.					Proportion per cent. of Illegitimate Births.				
	1891.	1892.	1893.	1894.	1895.	1891.	1892.	1893.	1894.	1895.

LEINSTER, . . .	97·6	97·8	97·5	97·6	97·5	2·4	2·2	2·5	2·7	2·5
MUNSTER, . . .	97·8	98·0	97·8	97·8	97·7	2·2	2·0	2·2	2·2	2·3
ULSTER, ...	96·0	96·1	96·3	96·1	96·1	4·0	3·8	3·7	3·8	3·9
CONNAUGHT, . .	99·3	99·5	99·3	99·3	99·3	0·7	0·5	0·7	0·7	0·7

The respective total birth-rates for the provinces in 1895 were—Leinster, 22·6 per 1,000 of the population in 1891; Munster, 21·6; Ulster, 24·1; and Connaught, 20·7.

The four counties having the highest rates are Antrim, 30·0 per 1,000 of the population in 1891; Down, 27·8; Dublin, 27·7; and Armagh, 23·3. Those with the lowest rates are—Longford, 17·9; Roscommon, 17·9; Monaghan, 18·3; and Cavan, 18·3.

Printed image digitised by the University of Southampton Library Digitisation Unit

Of the total births, 52·1 per cent. were registered in the first [illegible] of the year (181 days), and 47·9 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 27,724; in the second, 26,809; in the third, 26,182; and in the fourth, 24,608.

DEATHS.

The number of deaths registered during the year is 84,395, being equal to 1 in 54·2 or 18·4 per 1,000 of the estimated population. The deaths of males numher 41,764, and those of females 42,631, the former heing equal to 18·4 in every 1,000 males living, and tbe latter representing 18·5 per 1,000 females.

The death-rate (18·4) is 0·2 over the average rate for the preceding ten years, and also 0·2 over the rate for the year 1894.

As usual, very many of the Registrars furnished at the close of each quarter valuahle notes on the sanitary condition of their respective districts. These notes were embodied in the Quarterly Returns issued from this Department, and emanating as they did, from gentlemen qualified to speak decisively on the subject, it is to be hoped that they received the serious attention of the various Local Authorities intrusted with the administration of the Public Health Acts.

With respect to the death-rates for the four provinces, the rate for Connaught is only 13·5; that for Munster is 16·4; for Ulster, 19·2; and for Leinster, 20·5 per 1,000 of the population in 1891.

Of the thirty-two counties, the four having the lowest registered mortality are—Sligo, 12·4 per 1,000; Kerry, 12·9; Roscommon, 13·0; and Mayo, 13·2.

Those in which the rate was highest are—Dublin, 26·2; Antrim, 23·0; Down, 21·0; and Carlow, 20·1.

The deaths registered in the first half of the year generally outnumher those in tbe second. In 1895, 57·3 per cent. of the total deaths were registered in the six months, January to June inclusive, and 42·7 per cent. in the remaining six months of the year.

The annual rates represented hy the deaths registered in each quarter are as follow:—First quarter, 22·8 per 1,000 of the population; second, 19·5; third, 14·9; and fourth, 16·6. The rates for the first three quarters are above, and that for the fourtb quarter is helow, the corresponding average rates for the respective quarters in tbe ten years, 1885–94.

From the Table on pp. 174–183 *it will be seen that, of the* 84,395 *deaths registered during the year,* 2,484 *took place in Infirmaries and General and Special Hospitals;* 959 *in Public Lunatic Asylums;* 9,877 *in Workhouses and Workhouse Hospitals; and* 71,075 *were of persons who died "At their Own Homes, &c." As in former Reports a Table (see pages* 184–5) *is given showing like information for those Registrars' Districts in which the principal Urban Sanitary Districts in Ireland are situated.*

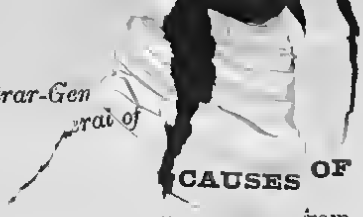

The deaths in "Infirmaries and General and Special Hospitals" constitute 2·9 per cent. of the total number, the per-centages for the four provinces varying from 0·4 in Connaught to 7·0 in Leinster. Over eleven per cent. of the deaths registered ocourred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 13·3; Munster, 16·8; Ulster, 8·0; and Connaught, 9·4.

I.—SPECIFIC FEBRILE OR ZYMOTIC DISEASES.

The number of deaths from Specific Febrile or Zymotic diseases registered during the year 1895 was 7,926 (3,778 males and 4,148 females), or 173 in every 100,000 of the estimated population, being 1,021 under the number for the preceding year, and 95 under the average for the ten years, 1885-94.

Of the 7,926 deaths from zymotic diseases 3,797, or 47·9 per cent., were amongst children under 10 years of age.

Small-pox.—During the year 1895 Small-pox caused 146 deaths, of which 119 occurred in the Dublin Registration District, 13 in other parts of the province of Leinster, 10 in the Poor Law Union, or Superintendent Registrar's District of Newry, and the remaining 4 in other parts of the province of Ulster, no deaths from the disease having been registered in either Munster or Connaught. The total number of deaths from small-pox during the preceding ten years (1885–94) was 103, and of these 72 were registered during the year 1894. According to the Returns 42 of the 146 persons who died from small-pox last year had been vaccinated, 57 were unvaccinated, and in the remaining 47 cases there was no statement as to vaccination.

Measles.—Deaths from Measles, which in the year 1892 amounted to 1,183, in the following year to 1,082, and in 1894 to 1,215, fell last year to 301, or 686 under the average for the ten years 1885–94, and lower than the number for any of these years except 1886 and 1891, the respective numbers for which were 284 and 240. Of the 301 deaths last year, 118 or 39 per cent. were in the Union of Belfast (where 37 per cent. of the fatal cases of the disease in the year 1894 occurred), 11 in Dunfanaghy Union, 39 in Lurgan Union, 15 in Millford Union, and 37 in other parts of Ulster, the total number for that province being 220, or 73 per cent. of the gross number for Ireland; in Connaught there were 49 deaths from the disease, in Munster 20, and in Leinster 12 only.

Scarlet Fever.—The number of deaths from Scarlet Fever registered is 590, being 9 under the number for the year 1894, and 48 below the average for the ten years 1885–94, during which period the yearly numbers ranged from 308 in the year 1891 to 1,147 in 1885. There are only 5 Unions in which the deaths from scarlet fever registered last year numbered 20 or upwards, these are:—Ballymena, 31 deaths; Belfast, 97 (being one-sixth of the total number for Ireland); Dublin South, 31; Limerick, 30; and Londonderry, 22. The total number for the province of Leinster is 140; for Munster, 106; for Ulster, 298, or one-half of the number for Ireland; and for Connaught, 46.

Typhus.—There were only 192 deaths from Typhus, being 149 below the average for the ten years 1885–94, and 5 under the lowest yearly number in that period, which was 227 in 1893. Of the 192 deaths last year, 27 occurred in the province of Leinster; 67 in Munster (including 10 in Cork Union); 55 in Ulster (including 19 in Belfast Union); and 43 in Connaught.

Simple continued and ill-defined Fever.—The number of deaths tabulated under this heading is 122, being a decline of 39 as compared with the number for the preceding year, and less than one-half of the average (271) for the ten years 1885–94. Of the 122 deaths 34 occurred in Leinster; 29 in Munster; 27 in Ulster (including 10 in Inishowen Union); and 32 in Connaught.

Enteric Fever.—The mortality from Enteric Fever was slightly under the average, the number of deaths for last year being 760 or 16·6 per 100,000 living, and the average for the preceding ten years 807 or 17·0 per 100,000. The respective rates for the four provinces for last year are, Leinster 16·5 per 100,000; Munster 11·3; Ulster 22·3; and Connaught 9·7. Of the 196 deaths from enteric fever in Leinster, 106 (equal to 0·3 per 1,000 of the population) were in the Dublin Registration District; and of the 361 deaths in Ulster, 194—equal to 0·7 per 1,000 of the population in 1891—occurred in Belfast Union. Compared with the numbers for the preceding year the deaths from enteric fever in the Dublin Registration District show a considerable decline and those for Belfast Union a small increase, and it may be added that the Dublin number for 1894 was much under that for the year 1893, and the Belfast deaths from the disease showed a slight increase on the number for 1893. The deaths from the disease last year in the two areas combined constitute 40 per cent. of the total number from enteric fever in Ireland. More than one-half of the total number of deaths from this disease occurred in persons aged between 15 and 35 years.

Whooping-cough.—Deaths from this disease, which in the two years 1893 and 1894 showed a tendency to increase, fell last year to 1,047, or 265 below the average for the preceding ten years, and 107 under the lowest number for any year in that period, which was 1,154 for the year 1892. The 1,047 deaths are equal to a rate of 22·9 per 100,000 of the population at all ages: the respective rates for the four Provinces are—Leinster, 22·6 per 100,000 of the population; Munster, 23·0; Ulster, 24·3; and Connaught, 16·0. Among the 268 deaths from whooping-cough in Leinster are 95 in the Dublin Registration District, and 58 (equal to 0·5 per 1,000 of the population) in the County of Wexford; of the 270 deaths in Munster, 84 (equal to 0·6 per 1,000 of the population) were in Cork Union; 29, or 1·0 per 1,000, in Skibbereen Union; 19, or 1·7 per 1,000, in Skull Union; and 79 in other parts of the County of Cork; of the 393 in Ulster, 122 (equivalent to 0·4 per 1,000 of the population according to the Census of 1891) were in Belfast Union, 20 in Ballymoney Union, 20, or 0·8 per 1,000 of the population, in Cootehill Union, 25 in the Union of Londonderry, and 61, or 1·0 per 1,000 of the population, in Lurgan Union; and the 116 deaths in Connaught comprise 20 in Westport Union, and 50 in other parts of the County of Mayo.

Diphtheria.—The number of deaths from diphtheria is 305, being 76 under the number for the preceding year, and 47 below the average for the ten years 1885–94. Of the 305 deaths, 183, or 60 per cent., occurred in the province of Ulster, 49 in the province of Leinster, 47 in Munster, and 26 in Connaught.

Erysipelas.—The number of deaths from erysipelas is 216, being 68 under the number for the preceding year, and 12 under the average for the ten years 1885–94.

Puerperal Fever.—The number of deaths from this disease is 321, being 2 under the average for the preceding ten years, and 133 under the number for the year 1894.

Influenza.—For the ten years 1864–73 (during the greater portion of which period there was not any epidemic outbreak of the disease), the average annual number of deaths from influenza registered in Ireland was 166, or 0·3 per 10,000 of the population, the yearly number ranging from 311 in 1864 to 96 in 1868; for the following ten years (1874–83) the average number was 82, the highest being 124 in 1875, and the lowest 39 in 1882; and for the six years, 1884–9, the average was 34 only, the numbers varying from 21 to 44. In 1890 the deaths from the disease amounted to 1,712, or 3·6 per 10,000 of the population; in the following year they fell to 891, or 1·9 in every 10,000 living; in the year 1892 they rose to 3,742, or 8·1 in every 10,000 of the population, and equal to 4·2 per cent. of the deaths from all causes; in 1893 they fell to 1,310, or 2·8 in every 10,000 of the population; in 1894 they again rose, the number for the year being 2,032, or 4·4 in every 10,000 persons, and last year they fell to 1,896, or 4·1 per 10,000 of the estimated population. In the province of Leinster the influenza death-rate in 1895 was 6·5 per 10,000 of the population, according to the Census of 1891; in Munster, 2·4; in Ulster, 4·3; and in Connaught, 2·2. The county rates range from 0·8 per 10,000 in Roscommon County to 9·3 in Monaghan and 9·8 in Carlow

The Table (XII.) on the opposite page shows, by Sexes and Age-Periods, the distribution of the deaths from influenza through the several counties.

Simple Cholera.—There were 140 deaths ascribed to this d[i]sease, being 107 over the number for the year 1894, and equal to double the average for the ten years 1885–94, but 100 under the number for the year 1893. Of those recorded in 1895, 25 were in Leinster, 23 in Munster, and 92 in Ulster.

Diarrhœa, Dysentery.—The number of deaths tabulated under this heading is 1,569, being 444 over the comparatively low number for the year 1894, and 180 over the average for the ten years 1885–94. The rate per 100,000 living represented by the deaths from these causes is 34·3, being 5·2 over the average rate for the preceding ten years. The respective rates for the four provinces are—Leinster, 37·5 per 100,000; Munster, 26·3; Ulster, 44·9; and Connaught, 12·1. Sixty-four per cent. of the deaths under this heading in Leinster were in the Dublin Registration District, and 47 per cent. of those in Ulster occurred in the Union of Belfast, where the deaths from these causes were equal to 117·6 per 100,000 of the population according to the Census of 1891.

Four males died from *Hydrophobia.*

II.—Parasitic Diseases.

There were only 41 deaths from diseases of this class.

III.—Dietetic Diseases.

The number of deaths from dietetic diseases is 200, including 188 from intemperance, 44 of which (42 males and 2 females) were caused by delirium tremens, and 144 (117 males and 27 females) come under the head of chronic alcoholism. The number of deaths from intemperance registered in the year 1894 was 145, and in the preceding year 155.

IV.—Constitutional Diseases.

From diseases classified as "constitutional" there resulted 16,132 deaths (7,744 males and 8,388 females), affording a rate of 1 in 5·2 of all the deaths, and equal to 353 in every 100,000 of the population.

Phthisis or Pulmonary Consumption.—Allowing for the decrease in the population phthisis was a little more fatal than usual, the number of deaths being 9,768 (4,640 males and 5,128 females), equal to 213·5 in every 100,000 persons, as compared with an average annual rate of 212·9 per 100,000 for the previous ten years.

As heretofore, Leinster and Ulster yield the highest rates, and Connanght the lowest. The rates for the four provinces are as follow:—Leinster, 235 per 100,000 of the population; Ulster, 226; Munster, 196; and Connaught, 141.

Of the 3,656 deaths from phthisis in Ulster, 1,157 occurred in Belfast union, this number being equal to 399 per 100,000 of the population according to the Census of 1891; and the 2,789 fatal cases of the disease in Leinster comprise 1,208, or 345 per 100,000 of the population, registered in the unions of Dublin North and Dublin South.

Of the total number of deaths from phthisis in Ireland, 7,318, or 75 per cent., were of persons aged 15 and under 45 years of age.

Mesenteric Disease.—The number of deaths from mesenteric disease is 924—490 males and 434 females.

Gout.—Only 21 deaths from gout were registered—15 males and 6 females.

Cancer.—The number of deaths from cancer is 2,296 (995 males and 1,301 females), being 162 over the average for the ten years 1885–94, but 79 under the number for the last year of that period.

The following Table shows, by Sexes and Age-periods, the deaths from Cancer registered during the year 1895, arranged according to the part of the body affected by the disease; also the number of deaths to 100,000 of the living at same age. It will be observed from the Table that the deaths entered under the first ten headings therein, which relate to various parts of the head, neck, and throat, amount to 476, and that of these, 331, or more than two-thirds, were deaths of males. 543 of the classified cases were deaths from cancer of the stomach; 281 females died from cancer of the breast, and 171 females from cancer of the uterus. The Table shows also the total deaths from cancer in each of the ten years, 1885–94, arranged by Age-periods.

Ma...

V.—Developmental Diseases.

The ...mount to 18,218, of which 17,674 (8,011 males and 9,663 females), or 20·9 *per cent. of the* deaths from all causes, were ascribed to "old age." Of the remaining 544 *deaths*, 436 are tabulated under the head of "premature birth"; 21 were caused by atelectasis, 16 by cyanosis, 47 by spina bifida; &c.

VI.—Local Diseases.

The number of deaths from "local diseases" registered amounted to 34,655 (17,704 males and 16,951 females), or 41·1 per cent. of the deaths from all causes.

Diseases of the Nervous System.—From this group of diseases there resulted 7,225 deaths—3,814 males and 3,411 females. They include 2,529 from convulsions (nearly all children), 1,438 tabulated under the head of "hemiplegia, brain paralysis"; 282 from paraplegia and diseases of the spinal cord; 1,335 from apoplexy; 429 from inflammation of the brain or its membranes; 324 from epilepsy; 402 from insanity (general paralysis of the insane); 14 (4 males and 10 females) from chorea or St. Vitus's dance; 174 from softening of the brain, &c.

Diseases of the Circulatory System.—Diseases of the circulatory system caused 6,578 deaths—3,349 males and 3,229 females.

*Diseases of the Respiratory System.**—Both absolutely and in proportion to population the mortality from diseases of the respiratory system* was under that for the preceding year, and also below the average for the ten years 1885–94. The number of deaths from the diseases in this group is 13,948—7,030 males and 6,918 females—or 304·9 in every 100,000 of the population. In the preceding year 14,139 deaths from these causes were registered, and the average number for the ten years, 1885–94 was 14,995, or 315·4 per 100,000 living. The respective rates for the Provinces, in 1895, are—Leinster, 349 per 100,000 persons; Munster, 269; Ulster, 330; and Connaught, 179.

Of the 13,948 deaths from these causes 8,814 (4,118 males and 4,696 females), resulted from bronchitis, being 205 over the number from that disease in the preceding year; 3,613 (2,164 males and 1,449 females) were from pneumonia or inflammation of the lungs, showing a decline of 114 as compared with the number for the preceding year; 449 from croup; 219 from asthma and emphysema; 214 from pleurisy; 103 from laryngitis, &c.

Diseases of the Digestive System.—These diseases caused 4,100 deaths (2,094 males and 2,006 females), including 402 from enteritis or inflammation of the bowels; 399 from peritonitis or inflammation of the covering of the bowels; 386 from ileus or obstruction of the bowels; 121 from hernia; 9 (6 males and 3 females) from fistula; 252—175 males and 77 females—from cirrhosis of liver; &c.

Diseases of the Urinary System.—To the various affections of this order of diseases 1,606 deaths (1,065 males and 541 females) were ascribed. Of these deaths, 690 (389 males and 301 females) were from Bright's disease; 261 from acute nephritis or inflammation of the kidneys; 14 from ischuria or suppression of urine; 18 from stone in the bladder; 41 from uræmia, &c.

The remaining deaths from Local Diseases comprise 67 from *Diseases of the Lymphatic System and of Ductless Glands*; 578 from *Diseases of the Reproductive System* (including 130 from diseases of the Organs of Generation and 448 from the Accidents of Childbirth); 293 from *Diseases of the Organs of Locomotion;* and 213 from *Diseases of the Integumentary System.*

VII.—Violent Deaths.

The number of violent deaths registered during the year is 2,087 (1,408 males and 679 females), or 45·6 in every 100,000 of the population, being considerably over the average rate for the ten years 1885–94. Accidents or negligence caused 1,875 of these deaths (including 448 from burns or scalds and 367 from drowning) against an average of 1,645; the number of cases of homicide (murder and manslaughter) was 59 or 36 below the average; there were 152 cases of suicide against an average of 121; and 1 man was executed.

Inquests.—There were 2,698 inquests reported to the Registrars during the year 1895, being 1 inquest to every 31 deaths registered.

AGES.

Deaths of infants under 1 year old numbered 11,041, being equal to 10·4 per cent. of the number of births registered.

Amongst children under 5 years of age 16,888 deaths occurred—a mortality equal to 37·0 in every 1,000 of the estimated number of the living at that age. Of these, 9,268 were boys and 7,620 girls; the former number representing 40·0 in every 1,000 boys, and the latter 33·9 in every 1,000 girls under 5 years old.

* Exclusive of Phthisis, or Pulmonary Consumption, for which see "Constitutional Diseases."

Printed image digitised by the University of Southampton Library Digitisation Unit

The deaths of persons aged 65 years and upwards are equ[illegible]nt. of the estimated number of the living at that age.

Among the deaths registered are 771 of persons stated to have been aged 95 years or upwards—340 males and 431 females; of these 137 (60 males and 77 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable, but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

EMIGRATION.

According to the Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, the number of emigrants (natives of Ireland), who left Ireland during the year 1895 was 48,703; of these 21,398 were males and 27,305 were females. Of the whole number, 4,923 were from the Province of Leinster; 22,176 from Munster; 8,109 from Ulster; and 13,495 from Connaught.

Of the total emigrants from Ireland in 1895, 6·6 per cent. were under 15 years of age; 84·7 per cent. were between 15 and 35 years old; 8·7 per cent. were 35 or upwards; and in 2 instances the ages were not specified.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf in Dublin in the year 1895 was 4¾*d.*, being equal to the average price for the previous year.* Oatmeal (1st quality) averaged 13*s.* 7*d.* per cwt. in Dublin: the average price for 1894 was 14*s.* 8*d.*; the average prices of potatoes in Dublin ranged from 2*s.* 11*d.* to 3*s.* 10*d.* per cwt., against 3*s.* to 4*s.* in 1894; and those of beef from 46*s.* 6*d.* to 57*s.* 6*d.* per cwt., against 44*s.* to 55*s.* in 1894.

TABLE XIV.—AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the years 1885–95, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS and the AVERAGE NUMBER of PERSONS in RECEIPT of RELIEF during each quarter of the year 1895.

* Prices for the years 1885–7, and the first two quarters of 1888, were derived from Returns furnished by Messrs. Manders & Co., those for the third and fourth quarters of 1888 and for the years 1889–95 from Returns received from "Bolands, Limited," and Messrs. Johnston & Co. (or Johnston, Mooney, and O'Brien, Limited)—the prices quoted for these two firms including delivery.

† Compiled from Returns furnished by the Local Government Board.

Printed image digitised by the University of Southampton Library Digitisation Unit

Sur[illegible] overed by several Tables in this Report, *i.e.*, 1895, and the ten y[illegible]*veying the period* c[illegible]d that beef was lowest in the year 1887, when the average prices [illegible]*ears preceding, it is found* [illegible]*s.* 6*d.* per cwt.; oatmeal (1st quality), was cheapest in 1889 a[illegible]*ranged from 44s. to 56s.* [illegible]nd 1895, in *each of* which years the average price was 13*s.* 7*d.* per cwt.; and potato[illegible]s, in 1888, when the average range of prices was from 2*s.* 2*d.* to 2*s.* 9*d.* per cwt. The hi[illegible]hest average price of oatmeal was 17*s.* 6*d.* in 1885; the highest range for potatoes, 3*s.* 6*d.* to 4*s.* 2*d.* per cwt. in 1891, and for beef, 52*s.* 6*d.* to 66*s.* per cwt. in 1885.

From Returns, for which I am indebted to the Local Government Board, it appears that the average number of workhouse inmates in Ireland on Saturdays during the year 1895 was 41,719, being 544 under the average for the preceding year; and that the average number of persons receiving out-door relief was 57,528, or 272 over the corresponding number for 1894.

THE WEATHER.

The following particulars and those given on pages 22–46 and pages 186–187, which are inserted by the kind permission of the Editor of the Dublin Journal of Medical Science, have been derived from Returns of Meteorological Observations taken in Dublin City during the years 1875–95, by J. W. Moore, Esq., M.D., F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1895–96. The Tables on pages 188–190 also, are founded on Dr. Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least one-hundredth (·01) of an inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1895 was 29·894 inches. The highest observed reading was 30·630 inches at 7 P.M. on January 30th. The lowest observed reading was 28·490 inches, at 9.30 P.M. on November 10th. The extreme range of atmospherical pressure was 2·140 inches compared with 2·214 inches in 1894.

The *Mean Temperature* of the year, deduced from the arithmetical mean of the maximal and minimal readings of the thermometer in the shade was 49·0°. The highest reading was 77·6° on June 26th; the lowest reading was 16·9° on January 9th. The average mean temperature for the years 1875–94, calculated in the same way, was 48·7°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M was 48·1°.

Rain fell on 194 days, including snow or sleet on 38 days and hail on 40 days. The average annual number of rainy days in the years 1875–94 was 197·5. The total rainfall measured 31·242 inches compared with an average of 27·867 inches in the twenty years 1875–94. During the first half of 1895 (January to June, inclusive) the rainfall was 12·282 inches on 80 days; during the second half (July to December, inclusive) 18·960 inches on 114 days.

As regards the *Direction of the Wind*. 730 observations were made during the year, with this result—N., 49; N.E., 41; E., 95; S.E., 72; S., 60; S.W., 94; W., 180; N.W., 99; Calms, 40.

I have the honour to be

Your Excellency's faithful servant,

THOS. W. GRIMSHAW,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
Dublin, 8th July, 1896.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1895.

By J. W. MOORE, Esq., M.D., F.R.C.P.I., F.R. MET. SOC.
(Extracted from the *Dublin Journal of Medical Science.*)

JANUARY.—A very severe month, with much snow and frost alternating with frequent thaws. The wind was very variable in direction, but came generally from polar quarters—from W. to S.E. through the northerly points of the compass. The coldest January since 1881, and as regards rainfall a record month. The precipitation was chiefly in the form of snow or sleet and hail. It amounted to 5·711 inches, or considerably more than double the average rainfall for January, and 1·389 inches in excess of the rainfall for this month in 1877, which had been the record January rainfall up to the present year. The snowstorm of the 12th was in Dublin a perfect blizzard.

In Dublin the arithmetical mean temperature (35·4°) was much below the average (41·4°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 34·6°. In the thirty years ending with 1894, January was coldest in 1881 (M. T.=33·2°), and warmest in 1875 (M. T.=46·6°). In 1867 the M. T. was 35·7°, and in 1865 it was 37·8°. In 1871 and in 1886 the M. T. was 37·9°; in 1879 (the "cold year") it was 35·3°. In 1888 the M. T. was 42·1°; in 1889, 42·4°; in 1890, 44·5°; in 1891, 40·1°; in 1892, 38·8°; in 1893, 40·8°, and in 1894, 41·0°. As a general rule, January in Dublin is not colder, but a shade warmer, than December. This is owing to the full development in January of a winter area of low pressure over the Atlantic, to the northwestward of the British Isles, and to a resulting prevalence of S.W. winds in their vicinity. January, 1895, proved an extreme exception to this rule, the M. T. being 8·5° below that of December, 1894 (43·9°).

The mean height of the barometer was 29·760 inches, or 0·114 inch below the corrected average value, for January—namely, 29·874 inches. The mercury rose to 30·630 inches at 7 p.m. of the 30th and fell to 28·733 inches at 7.30 a.m. of the 14th. The observed range of atmospheric pressure was, therefore, as much as 1·897 inches—that is, a little less than one inch and nine-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 34·6°, or 8·4° below the value for December, 1894. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the M. T. becomes 35·6°, compared with a twenty-five years' average of 41·5°. The arithmetical mean of the maximal and minimal readings was 35·4°, compared with a twenty-five years' average of 41·4°. On the 22nd the thermometer in the screen rose to 44·8°—wind, W.; on the 9th the temperature fell to 16·9°—wind, W. The minimum on the grass was 12·0°, also on the 9th.

The rainfall was 5·711 inches, distributed over 24 days. The average rainfall for January in the twenty-five years, 1865-89, inclusive, was 2·200 inches, and the average number of rainy days was 17·3. The rainfall, therefore, and the rainy days were both much above the average. In 1877 the rainfall in January was very large—4·322 inches on 25 days; in 1869, also, 4·258 inches fell—on, however, only 18 days. On the other hand, in 1876, only ·406 inch was measured on but 9 days; and in 1880 the rainfall was only ·563 inch on but 8 days. In January, 1886, 3·244 inches of rain was measured on 26 days; in 1887 ("the dry year"), 1·816 inches fell on 16 days; in 1888, 1·247 inches on 9 days; in 1889, 2·213 inches on 16 days; in 1890, 2·975 inches on 21 days; in 1891, only ·672 inch on 14 days; in 1892, 1·698 inches on 20 days; in 1893, 2·239 inches on 19 days, and in 1894, 2·838 inches on 23 days.

Lunar halos were seen on the 5th and 6th. The atmosphere was foggy on the 8th, 9th, 18th, 19th, and 28th. High winds were noted on 13 days, reaching the force of a gale on 4 days—the 6th, 11th, 12th, and 24th. Hail fell on the 2nd, 6th, 7th, 8th, 10th, 13th, 21st, 24th, 25th, and 31st, and snow or sleet on the 3rd, 5th, 6th, 7th, 8th, 10th, 12th, 13th, 25th, 27th, 28th, 30th, and 31st. Temperature never exceeded 45° in the screen; while it fell to or below 32° in the screen on 18 nights, compared with 7 nights in 1894, 4 nights in 1893, 15 nights in 1892, 7 nights in 1891, 1 night in 1890, and 3 nights in 1889. The minima on the grass were 32°, or less, on 29 nights, compared with 17 nights in 1894, 16 nights in 1893, 25 nights in 1892, 21 nights in 1891, 15 nights in 1890, and 16 nights in 1889.

The record for the period ended Saturday the 5th, is one of very cold, changeable weather, fresh to strong westerly to northerly winds, alternate cloud and sunshine, rain or snow and frost. Tuesday, the 1st, was fair and frosty, but a thaw set in at night and a good deal of cold rain fell on Wednesday. In the evening squalls of heavy rain and hail passed over Dublin, and the wind (which had backed to W. or W.S.W.) began again to veer towards N. By Thursday morning a depression of some intensity had formed over the Straits of Dover and the N.E. of France. This caused cold showers, and strong northerly winds in the British Isles. In Dublin the weather on this day was very bright and dry, but heavy showers were seen to pass southwards out at sea, and thunder, lightning and hail occurred in the Scilly Islands at night. Sharp frost set in on Friday, but the approach of a new depression from N.W. brought sleet and rain on Saturday, the phenomenon of a "glazed frost" being observed in Dublin throughout the forenoon. The height of the barometer in Dublin ranged between 29·705 inches at 9 p.m. of Wednesday (wind, W.N.W.) and 30·313 inches at 9 p.m. of Friday (wind, N.W.). On Wednesday the screened thermometers rose to 42·9°; on Saturday, they fell to 26·9°. The minimum on the grass on the latter day was 21·0°. Rain fell on three days to the total amount of ·318 inch, ·218 inch being measured on Wednesday. The prevailing wind was N.W. Hail fell on Wednesday; sleet, or snow, on Thursday and Saturday.

Europe, lowest over Italy and the Mediterranean. Hence polar winds ... er Great Britain and Centr... frequent falls of snow and hail. On Tuesday snow fell in large quanti... prevailed, and there were ... a temperature of 29°—the depth of snow on the level was 2½ inches. ... ies in and about Dublin at ... The sky became cloudy at night, checking radiation; hut afterwards the clouds dispersed and ter... perature fell with great rapidity to 16·9° in the screen and 12·0° on the snow. Hard frost prevail... d throughout Wednesday, cirro-cumulus clouds coming from E.S.E. and S.E., while a light westerly... land breeze and much fog held all day. Atmospheric pressure now gave way in the W., so that ... decided southerly air-current spread over Ireland, with a rising thermometer, thaw, and falls of rain, sleet, and hail. At this time, the frost "stiffened" in England and remained intense in Scotland. On Friday, at 8 a.m., the thermometer read 11° at Aberdeen, 14° at York, 16° at Loughborough, 18° at Shields, and 19° at Oxford. In Dublin there was a steady thaw on this day, with a piercingly cold S.S.E. wind, which momentarily freshened, until at night it blew a fresh to strong gale. After midnight the most violent snowstorm experienced since January 18, 1881, began and raged until late on Saturday afternoon. It was renewed on Saturday night, so that no such snowfall has occurred in Dublin since 1855—the "Crimean winter." In Dublin the mean atmospheric pressure was 29·762 inches, the barometer rising to 30·053 inches at 9 p.m. on Monday (wind, N.N.E.), and falling to 29·058 inches at 9 p.m. of Saturday (wind, S.E.). The corrected mean temperature was 32·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 31·9°. On Sunday the screened thermometers rose to 41·6°, on Wednesday they fell to 16·9°. The rainfall (which consisted chiefly of snow and hail) amounted to 3·012 inches, on six days, ·847 inch being credited to Friday and 1·802 inches to Saturday. The prevailing winds were N.N.E. and S.S.E.

The record of the week ended Saturday, the 19th, is again one of cold, winterly, and generally unsettled weather. The cold was certainly not so severe as that felt in the previous week, but in Dublin especially it was intensified by a prolonged thaw during the early days of the period—in fact, masses of snow lay here and there even on Saturday, a week after the "blizzard" of the 12th. On Sunday and Monday the centre of the large and deep depression, which had caused the south-easterly gale and snowstorm, lay almost stationary over the Co. Kerry and the adjacent parts of the Atlantic. The wind remained in the S.E., except in Brittany and off the entrance to the English Channel, where it was south-westerly. Rain fell at most stations in variable amounts. In Dublin the precipitation was considerable, in consequence probably of a local chill caused by the melting snow. The depression moved southwards on Tuesday and then passed up St. George's Channel, crossing Wales and the North of England, and finally joining another depression off the North of Scotland on Thursday morning. From the time of its appearance on Friday, January 11, until it passed away on Friday, the 18th, this depression caused a rainfall of no less than 4·329 inches in the City of Dublin—this is nearly double the average January rainfall in Dublin—2·200 inches. Friday was fine and frosty, but at night the weather again became rainy, and Saturday was wet and gloomy in the extreme. In Dublin the mean atmospheric pressure was only 29·147 inches—the barometer remaining below 29 inches for as many as 98 hours—from 10 p.m. of Saturday, the 12th, until midnight of Wednesday, the 16th. The absolute minimum at this station was 28·733 inches at 7.30 a.m. of Monday (wind, S.E.). The maximum pressure was 29·689 inches at 9 p.m. of Friday (wind, calm). The corrected mean temperature was 38·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 37·8°. On Tuesday and again on Saturday temperature rose to 42·7° in the screen; on Friday it fell to 31·0° in the screen, and to 25·2° on the grass. The rainfall was 1·928 inches on six days, ·960 inch being registered on Wednesday. Snow and hail fell on Sunday.

The weather during the week ended Saturday, the 26th, continued winterly and inclement as in past weeks. Polar winds prevailed, and blew strongly, as barometric gradients were at times very steep. Considerable quantities of cold rain, hail, and snow fell generally, and thunder and lightning, followed by a snowstorm, were reported from London on Wednesday forenoon. At the beginning of the week a depression lay near the mouth of the English Channel, and from this position it travelled south-eastwards across France, gradually filling up and finally dispersing. This disturbance brought copious falls of rain to England and the French shores of the Channel. Temperature also rose very decidedly but transitorily over the South of England—to 52° in London and 56° at Prawle Point on Sunday. In Scotland on that day the thermometer failed to read 40°, and in Ireland the highest reading was 44° in Dublin and at Roche's Point, Cork. From Tuesday onward the barometer remained very low in the North of Europe, and more or less serious secondary depressions passed in a south-easterly direction down the North Sea or across the British Islands. At 8 a.m. of Thursday the barometer read only 28·88 inches at Wick, but 29·72 inches at Valentia (Kerry). On Friday, a rush of intensely cold, dry polar air passed southwards over the United Kingdom, and dry powdery snow fell. On the morning of this day the thermometer read—16° F. at Haparanda, on the Gulf of Bothnia. In Dublin, the mean atmospheric pressure was 29·799 inches, the barometer ranging from 30·184 inches at 9 p.m. of Monday (wind, N.N.E.) to 29·207 inches at 12.45 p.m. of Thursday (wind, W.N.W.). The corrected mean temperature was 37·0°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 35·6°. On Tuesday, the screened thermometers rose to 44·8°—the maximum of this cold month; on Saturday they fell to 26·0°. The rainfall was ·291 inch, on six days, ·111 inch being measured on Wednesday. Hail fell on Monday, Thursday, and Friday; snow on Friday. The prevalent winds were N.E. and N.W.

Frequent changes from frost to thaw, and an almost uninterrupted prevalence of winds from polar quarters made the last days of the month very trying. The striking features of the period were the intensity of the cold in all parts of Western Europe from time to time and the sudden and unusual alterations of atmospheric pressure which occurred. On Sunday and Monday a chain of shallow barometric depressions stretched from the Arctic Circle across Norway down the North Sea and across France to the Mediterranean. Fresh northerly winds blew in Scotland and Ireland, which

Printed image digitised by the University of Southampton Library Digitisation Unit

lay to the west of the trough of low pressure, and snow and hail [illegible] Sunday evening lightning was seen in Duhlin, at Prawle Point, Devon, and [illegible] at intervals. On S[illegible]night a shallow V-shaped depression advanced over Ireland from the Atla[illegible]ntic, causin[illegible] On Monday [illegible]ain on Tuesday. This low-pressure system soon filled up, as an antic[illegible]yclone of unusual intensity [illegible]formed over the South of Scandinavia, where the barometer rose t[illegible]o 31·0 inches at 8 a.m. of Wednesday. The barometer remaining low in the Mediterranean hasin, fres[illegible]asterly gales and hitter cold prevailed until the close of the month. Throughout the period large quantities of snow or sleet and hail fell in nearly all districts. In Dublin atmospheric pressure ranged hetween 29·809 inches at 9 a.m. of Sunday (wind, W.N.W.) and 30·630 inches at 7 p.m. of Wednesday (wind, E.) On Monday the screened thermometers fell to 23·8°; on Tuesday they rose to 42·9°. The prevalent winds were N.W., E., and N.E. The rainfall (chiefly in the form of snow, sleet, and hail) was ·162 inch on three days—·080 inch heing measured on Thursday, the 31st.

In Duhlin the rainfall up to January 31, 1895, amounted to 5·711 inches on 24 days, compared with a twenty-five years' average (1865–1889) of 2·200 inches on 17·3 days.

At Knockdolian, Greystones, Co. Wicklow, 6·190 inches of rain fell on 19 days. The heaviest falls in 24 hours were 1·040 inches on the 12th, and ·910 inch on the 16th.

At Cloneevin, Killiney, Co. Duhlin, the rainfall was 5·930 inches on 24 days, 1·470 inches heing measured on the 12th. This was the highest rainfall recorded at this station in January during the past 11 years. The average fall for the preceding 10 years was 2·019 inches on 16·6 days. Snow fell on the 1st, 2nd, 6th, 7th, 12th, 25th, and 31st. In 1894, the rainfall was 3·260 inchee on 23 days.

FEBRUARY.—The coldest February experienced for forty years—that is, since 1855—the "Crimean winter." The mean temperature was 8·6° below the average, 10·7° helow that of February, 1894, and 1·4° helow that of January, 1895. There was an overwhelming prevalence of strong easterly and south-easterly winds. The rainfall was very scanty, and consisted principally of snow and hail. Ahsolute drought held from the 7th to the 20th, inclusive. On several occasions the thermometer fell helow zero in the screen in various parts of the United Kingdom, the lowest recorded reading of all being—17° at Braemar on the 11th.

In Duhlin the mean temperature (34·2°) was 8·6° helow the average (42·8°); the mean dry hulh readings at 9 a.m. and 9 p.m. were 33·6°. In the thirty years ending with 1894, February was coldest in 1873 (M. T. = 37·9°), and warmest in 1869 (M. T. = 46·7°). In 1886 the M. T. was 39·7°. In the year 1879 (the "cold year") it was 40·1°. In 1888 it was as low as 38·6°; in 1889 it was 40·3°; in 1890, 41·5°; in 1891, 44·7°; in 1892, 41·3°; in 1893, 42·7°; and in 1894, 44·9°.

The mean height of the harometer was 30·111 inches, or 0·256 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·548 inches at 9 p.m. of the 16th, and fell to 29·576 inches at 9 p.m. of the 6th. The ohserved range of atmospheric pressure was, therefore, 0·972 inch—that is, a little less than an inch.

The mean temperature deduced from daily readings of the dry hulh thermometer at 9 a.m. and 9 p.m. was 33·6°, or 10·1° helow the value for February, 1894, and 1·0° helow that for January, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·50), the M. T. is 34·2°, compared with a twenty-five years' average of 42·8°. On the 28th the thermometer in the screen rose to 48·6°—wind, W.S.W.; on the 7th the temperature fell to 19·0°—wind, calm. The minimum on the grass (snow) was 10·4° also on the 7th.

The rainfall was only ·625 inch, distrihuted over 9 days. The average rainfall for February in the twenty-five years, 1865–89, inclusive, was 2·150 inches, and the average numher of rainy days was 17·2. The rainfall, therefore, and also the rainy days, were much helow the average. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879, also, 3·706 inches fell on 23 days. On the other hand, in 1873, only ·925 inch was measured on hut 8 days; in 1890, only ·802 inch fell on hut 7 days; and in 1887 only ·541 inch fell on 11 days. The rainfall in 1891 was much the smallest recorded in February for very many years. The record is prohahly unparalleled—·042 inch on 2 days. The nearest approach to this drought was in Septemher, 1865, when only ·056 inch of rain was measured on hut 3 days. In 1892, the rainfall was 2·119 inches, on 19 days; in 1893, 2·669 inches fell on 22 days, and in 1894, 1·903 inches on 16 days.

Snow or sleet fell on 7 days—the 1st, 2nd, 5th, 6th, 7th, 9th, and 10th, while hail was ohserved on 6 days—the 1st, 2nd, 5th, 6th, 7th, and 25th.

The atmosphere was foggy on 6 days—namely, the 7th, 11th, 12th, 19th, 21st and 22nd. The amount of cloud—55·0 per cent.—was considerahly in defect of the average—66 per cent. High winds were noted on 15 days, reaching the force of a gale on 7 occasions—namely, the 1st, 3rd, 4th, 9th, 10th, 14th and 15th.

The temperature reached or exceeded 40° in the screen on 8 days, hut it never reached 50°, and only twice exceeded 45°. On the other hand, it fell to or helow 32° in the screen on as many as 18 nights, compared with only 2 nights in 1894, 5 nights in hoth 1893 and 1892, and 2 nights in 1891. The minima on the grass were 32°, or less, on every night, compared with 10 nights in 1894, 13 nights in 1893, 16 nights in 1892, and 17 nights in 1891. The thermometer failed to rise to or ahove 40° in the screen during the daytime on 20 days.

On Friday, the 1st, the frost relaxed in Norway, Scotland, the North of England and Ireland, while it "stiffened" in Germany, France, and the South of England. Snow, or sleet, and hail fell ahundantly on this and the following day in nearly all districts.

The cold weather, which had set in on Decemher 27, 1894, and had continued with varying intensity ever since, reached a climax in the week ending Saturday, the 9th, and frost of almost unparalleled severity was felt in nearly all parts of the British Islands in the latter part of the period. To this result the distrihution of atmospheric pressure over Western Europe and the presence of large quantities of snow upon the ground alike contrihuted. An anticyclone, near the

Printed image digitised by the University of Southampton Library Digitisation Unit

centre of which the barometer rose to 31 inches on Wednesday, lay over Scandinavia and the extreme North of Russia throughout. On the other hand, atmospheric pressure was unusually low over the Peninsula and the Atlantic between Portugal and the Azores. At 8 a.m. of Sunday the barometer read only 28·93 inches at Ponta Delgada in the Azores. Consequently, strong easterly or south-easterly winds prevailed all along the western seaboard of Europe. On Wednesday an irregular low-pressure area was formed over Scotland and Ireland, where it caused severe snowstorms followed by intense frost—at night the screened thermometer fell to 0° (zero) at Edgeworthstown, Co. Longford, to −2° at Brookeborough, Co. Fermanagh, and to −4° at Tullamore, King's Co. At 8 a.m. of Friday the reading at Loughborough, Leicestershire, was −4°. In London, it was +12° at the same time. On Saturday the cold became less severe, but no sign of a permanent thaw appeared, and the week closed with most of the great rivers of the British Islands frozen across, or blocked with ice-floes. In Dublin the mean height of the barometer was 29·950 inches, pressure ranging between 30·187 inches at 9 p.m. of Monday (wind, E.), and 29·576 inches at 9 p.m. of Wednesday (wind, N.N.E.) The mean temperature was only 31·6°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 31·2°. On Monday the screened thermometers rose to 38·9°. On Thursday they fell to 19·0°, the minimum on the snow being 10·4°. Rainfall amounted to ·330 inch on two days—it was exclusively in the form of snow and hail, ·310 inch being measured on Wednesday. The prevalent winds were E. and S.E.

During the week ended Saturday, the 16th, very severe weather was again felt in Scandinavia, Germany, France, and the British Isles. In the Peninsula, and at times in Italy also, more genial conditions prevailed. On Sunday and again on Thursday an Atlantic depression was found off the S.W. of Ireland; but in neither instance did the disturbance make any headway in forcing a passage northeastwards. The first system travelled southeastwards to France and disappeared. The second behaved in a very similar way. The former system caused a heavy snowstorm on Sunday in the south of Ireland, leading to a delay of 26 hours in the despatch of the American mails from Queenstown, the mail train having been blocked for that space of time by enormous snowdrifts on the Great Southern and Western Railway between Limerick Junction and Mallow. In Dublin the sky was overcast throughout Sunday, lofty cirro-stratus coming in an upper current from S.W., while the wind was strong from S.E. Only a few flakes of snow, however, fell in or near the city; but at Roche's Point, Co. Cork, melted snow and rain yielded 1·10 inches of water in the rain-gauge for the two days. The second depression produced a partial thaw on Wednesday and Thursday—the thermometer rising to 46° at Valentia Island—but on Thursday afternoon frost returned. The wind rose to a fresh gale from E. on Friday evening. Saturday was cloudless, with bright sunshine and a gradual thaw in the daytime, but frost at night. In Dublin the mean height of the barometer was 30·073 inches, the range of pressure being from 29·625 inches at 9 p.m. of Sunday (wind, S.E.), to 30·548 inches at 9 p.m. of Saturday (wind, E.S.E.). The mean temperature was 32·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 31·9°. On Wednesday and also on Saturday the screened thermometers rose to 39·6°. On Tuesday they fell to 21·1°. The minimum on the snow on Tuesday was 17·0°. The prevailing winds were S.E. and E. There was no measurable rainfall.

The week ended Saturday, the 23rd, while still very cold, witnessed a gradual but decided advance of temperature and a general mitigation in the rigours of an exceptionally severe and protracted "cold snap." So far as the British Islands were concerned, an anticyclonic distribution of atmospheric pressure held almost to the close—on Saturday, however, a depression was evidently encroaching upon our Northern and North-western coasts. At 8 a.m. of Sunday, the isobar of 30·6 inches embraced the east of Scotland and temperature was as low as 7° at Nairn. Keen easterly winds prevailed in Ireland. Next morning the thermometer read only 5° at Nairn, where it had been down to 2° in the night. The anticyclone now moved in a S.W. direction to Ireland, over which country it remained lying until Saturday. This change of position in the area of high pressure caused the keen, dry easterly winds to die out, their place being taken by moist N.W. winds, which brought with them more or less clouded skies, a higher temperature, haze and some damp fog. Very little precipitation, however, took place in any part of the British Isles. In Norway and Portugal, on the contrary, rain fell pretty freely, the measurement at Lisbon being particularly large—2·41 inches on the last five days of the week. In Dublin the mean height of the barometer was 30·410 inches, pressure ranging from 30·510 inches at 9 a.m. of Sunday (wind, E.S.E.), to 30·263 inches at 9 p.m. of Saturday (wind, W. by N.). The mean temperature was 35·1°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 34·0°. On Saturday the thermometers in the screen rose to 42·9°. On Thursday they fell to 25·8°. On Thursday for the first time in February temperature rose above 40·0°. Rain fell on that day, but only to the amount of ·010 inch. On Sunday morning, the 24th, an additional rainfall of ·011 inch occurred, the total measurement for the week thus becoming ·021 inch on two days. The prevalent winds were at first E.S.E, afterwards W.N.W.

During the closing period (24th—28th, inclusive) there was again an advance in temperature, although not of a pronounced or permanent kind. Both in the North of Europe and in the extreme South, the distribution of atmospheric pressure was cyclonic. Between these areas and especially over Ireland the barometer stood relatively high and at times the isobars were of the anticyclonic type. This was the case from Monday until Thursday, when sharp night frosts occurred in Central England and also in Central Ireland—at Parsonstown the screened thermometer fell to 22° on Monday night. The day maxima were, however, higher than for many weeks past. On Thursday, for example, the thermometer rose to 50° at Valentia Island, 49° at Leith, Donaghadee, Parsonstown, and in Dublin (48·6°); 48° at Aberdeen, Loughborough, Roche's Point, and Scilly; and 47° in many other places. On Thursday the screened thermometers rose to 48·6°, on Tuesday they fell to 28·9°. The prevailing wind was N.W. Rain fell on three days to the total amount of ·093 inch, ·069 inch being measured on Thursday.

In Dublin the rainfall up to February 28, 1895, amounted to 6·336 inches on 33 days, compared with 4·741 inches on 39 days in 1894, 4·908 inches on 41 days in 1893, 3·817 inches on 39 days in

Printed image digitised by the University of Southampton Library Digitisation Unit

1892, ·714 inch on 16 days in 1891, and a twenty-five years' (1865–1[illegible]88) average of 4·350 inches on 34·5 days.

At Knockdolian, Greystones, Co. Wicklow, ·765 inch of rain fell in Febru[illegible] on 5 days. The heaviest fall in 24 hours was ·365 inch on the 1st. The total fall to February 28th inclusive was 6·955 inches on 24 days.

The rainfall in February at Cloneevin, Killiney, Co. Dublin, amounted to only ·46 inch on 7 days. The average rainfall for February during 10 years (1885–94) at this station was 1·614 inches, on 13·4 days. The greatest rainfall in 24 hours was ·19 inch on the 6th. Absolute drought prevailed from the 7th to the 20th, both inclusive. Since January 1, the rainfall was 6·39 inches, on 31 days.

MARCH.—A changeable, dull, and rather rainy month. The cold weather, which had prevailed throughout January and February, lasted until Wednesday, the 13th, when the thermometer touched 50° in the shade in Dublin for the first time since December 25, 1894. A mild spell followed, continuing to the 24th, after which temperature fell away again and remained below average to the end of the month. This period of renewed cold was also one of heavy and persistent rainfall, 1·334 inches being measured in the week ended Saturday, the 30th.

In Dublin the arithmetical mean temperature (44·1°) was one degree above the average (43·1°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 43·0°. In the thirty years ending with 1894, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1893 (M. T. = 48·1°), and in 1868 (M. T. = 47·3°). In 1876 the M. T. was 41·1°, in 1879 (the "cold year") it was 42·5°, in 1894 it was as high as 45·4°, but in 1892 it had been as low as 39·1°. In 1892 February was actually 2·2° warmer than March.

The mean height of the barometer was 29·688 inches, or 0·233 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·315 inches at 9 a.m. of the 17th, and fell to 28·632 inches at 4·45 a.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1·683 inches—that is, almost an inch and seven-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 43·0°, or 9·4° above the value for February, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·485), the M.T. becomes 43·9°. The arithmetical mean of the maximal and minimal readings was 44·1°, compared with a twenty-five years' average of 43·1°. On the 16th the thermometer in the screen rose to 58·7°—wind, W.S.W.; on the 13th the temperature fell to 29·5°—wind, W. The minimum on the grass was 24·9° on the 4th.

The rainfall was 2·748 inches, distributed over 19 days. The average rainfall for March in the twenty-five years, 1865–89, inclusive, was 2·061 inches, and the average number of rainy days was 16·5. The rainfall, therefore, and also the rainy days, were considerably above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days; in 1888, 3·753 inches fell on 18 days; in 1866 also 3·629 inches fell on 21 days. On the other hand, in 1871, only ·815 inch was measured on 12 days, and in 1874 only ·953 inch fell on 12 days. In 1887 (the "dry year"), 1·485 inches of rain fell on 15 days; in 1889, 1·076 inches fell on, however, as many as 17 days; in 1890 the fall was 3·693 inches on 17 days; but in 1891 only ·936 inch fell on 16 days, and in 1892 only ·991 inch on but 9 days. The smallest March rainfall was ·288 inch on 8 days in 1893. In 1894, 1·287 inches fell on 14 days.

The atmosphere was more or less foggy in the city on 6 days—viz., the 5th, 12th, 13th, 16th, 18th, and 27th. High winds were noted on 13 days, reaching the force of a gale on three occasions—the 23rd, 24th, and 28th. Snow or sleet occurred on the 2nd, 3rd, 25th, and 28th; and hail fell on the 2nd, 3rd, 24th, 25th, 29th, and 31st. The temperature exceeded 50° in the screen on 13 days, compared with as many as 22 days in 1894, 26 days in 1893, only 7 days in 1892, 9 days in 1891, and 19 days in 1890, while it fell to 32° in the screen on 5 nights. In March, 1892, frost had occurred in the shade on as many as 16 nights; but no shade frost occurred in March, 1893. The minima on the grass were 32°, or less, on 10 nights, compared with 12 nights in 1894 and 1893, 25 nights in 1892, 20 nights in 1891, and 16 nights in 1890. The thermometer never rose to 60° in the screen, while it once failed to reach 40° (on the 3rd). In March, 1892, the thermometer did not rise to 40° in the screen on 9 days. A solar halo was seen on the 18th, and a lunar halo appeared on the 13th. Brilliant aurora borealis also occurred on the night of the 13th. Lightning was seen on the evening of the 24th.

The first two days of the month were changeable, with frequent showers. On Friday, the 1st, a large depression spread south-eastwards down the North Sea, causing falls of rain, hail, and sleet in most districts. Saturday was a raw, dull, wet day, and snow, sleet, and hail were again reported, the rainfall being ·162 inch.

Although it began with a snowstorm, the week ended Saturday the 9th was not unfavourable, and a further slight advance in temperature is to be recorded. Rain also fell more freely than in past weeks. At the beginning of the period the barometer was low to the eastward, high to the westward, and accordingly fresh winds from northerly points of the compass prevailed. Borne on these came a heavy snowstorm on Sunday morning, followed by a sharp frost in the afternoon and at night. On Tuesday the western area of high pressure moved south-eastwards from the West of Ireland to the Bay of Biscay, and a V-shaped depression came in from the Atlantic over Ireland and Scotland. In front of this system quantities of cirrus cloud in long streaks spread across the sky from N.N.W., almost against the surface wind, which became southerly. Rain fell in many places—freely in the S.W. of Ireland. On Thursday a larger and deeper depression advanced eastwards across the British Isles. It caused fresh S. and S.E. winds and considerable falls of rain. At 8 a.m. of Friday the barometer was down to 29·17 inches both at Belmullet and at Valentia Island. Heavy rain fell at both these stations. On Saturday, the wind backed to E. and N.E. in Ireland, as a subsidiary depression advanced to the English and St. George's Channels. In Dublin the mean atmospheric pressure was 29·687 inches, the barometer rising to 30·076 inches at 9 p.m. of Monday (wind, W.N.W.)

Cold and inclement as in past weeks at first, the weather of the week ended Saturday, the 16th, underwent a sudden and complete change on Wednesday, the 13th, and spring followed hard upon the retreating footsteps of the winter. On the day named the thermometer reached 50° in the screen in Dublin for the first time in 1895, or indeed since Christmas Day, 1894. The mean temperature of the first four days was 38·9°, that is, 4·3° below the average; that of the three last days was 50·4°, or 7·2° above the average. The mean temperature for the whole week was 43·8°, or 0·6° above the average. On Sunday morning a well-marked area of low pressure lay over the extreme S.E. of Ireland. Cold, gloomy, wet weather prevailed, with a breeze from N.E. in Dublin, but from S. in London. The total eclipse of the moon in the early morning hours of Monday was rendered invisible by clouds in Dublin. It was, however, well observed at Greenwich and in the English Midlands. At this time a very deep depression was passing north-eastwards across Portugal and Spain, the barometer having fallen to 28·91 inches at Lisbon on Sunday evening. As this system advanced, pressure became more uniform in the British Islands, so that calm weather, with fog at times, was felt. On Wednesday, the barometer rose over France and England, and an anticyclone formed which threw a warm S.W. current upon the Irish and Scotch coasts. This afterwards spread over England, where the thermometer rose to a maximum of 57° from a minimum of 31° on Thursday. A very fine display of aurora borealis occurred on Wednesday evening and was seen from nearly all parts of the British Islands. In Dublin the mean height of the barometer was 29·925 inches, pressure ranging between 29·267 inches at 3 a.m. of Sunday (wind, N.E.), and 30·306 inches at 9 p.m. of Saturday (wind, W.S.W.) The corrected mean temperature was 43·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 42·4°. On Wednesday the screened thermometers fell to 29·5°; on Saturday they rose to 58·7°. The prevalent winds were W. and S.W. Rain fell on Sunday only, to the amount of ·248 inch.

The weather of the week ended Saturday, the 23rd, was uneventful, save in one particular—namely, its remarkable mildness in contrast to the severity of so many previous weeks in succession. It was in character autumnal rather than spring-like, the air being very soft and damp, and the sky often cloudy or overcast, with frequent light rain. Sunday, however, was beautiful—sunny and mild as well as calm. On this day a broad band of high atmospheric pressure—30·20 inches and upwards—embraced England, Ireland, Germany, and the northern two-thirds of France. To the northward pressure diminished to 29·09 inches at Bodo, in Norway, in a depression which afterwards travelled eastwards to Russia. A series of areas of low pressure subsequently crossed the British Islands in an easterly direction, causing the mild, damp, changeable weather of which mention has been made above. The most important of these systems advanced over Ireland on Saturday, bringing with it warm, squally S.W. winds and a considerable rainfall. On Sunday and Monday the thermometer rose to 60° or 61° at several inland English stations. On Wednesday a maximum of 60° was recorded at Roche's Point, Cork Harbour; on Thursday the thermometer reached 61° in London, 62° at Prawle Point, Devon, and 63° at Oxford; on Friday maxima of 64° to 66° were reported from several English stations. In Dublin the mean height of the barometer was 29·953 inches, pressure ranging from 30·315 inches at 9 a.m. of Sunday (wind, W.) to 29·239 inches at 9 p.m. of Saturday (wind, S.W.) The corrected mean temperature was 49·8°, or 6·0° above that of the previous week. The mean dry bulb reading at 9 a.m. and 9 p.m. was 49·2. On Monday the screened thermometers fell to 35·9°, on Thursday they rose to 57·8°. Rain fell in measurable amount on three days, the total precipitation being ·410 inch, of which ·313 inch was received on Saturday. The prevailing winds were W. and W.S.W.

Extremely unsettled, wet, stormy, and generally inclement weather held throughout the week ended Saturday, the 30th. The distribution of atmospheric pressure over North-Western Europe was cyclonic in type, and on Sunday and again on Thursday the barometer fell to about 28½ inches in the centre of deep and extensive depressions. At 8 a.m. of Sunday the barometer read exactly 28·50 inches at Sumburgh Head, in the Shetlands, whereas it stood as high as 30·35 inches at Lisbon. A well-marked secondary depression lay over the S.E. of Ireland at the hour named. This system crossed England in the course of the day, causing very severe and destructive gales over Wales and the central and eastern English counties. The rainfall was slight within the storm area, but very heavy in the south of Ireland. Thunder occurred at Belmullet and York, and lightning was seen at night throughout England and Ireland. The storm was apparently violent in Scandinavia and accompanied by falls of wet snow, for it destroyed telegraphic communication. Snow also fell heavily on the Dublin Mountains, and in the city there were sharp showers of cold rain, sleet, and hail. On Tuesday forenoon a small partial eclipse of the sun (·09 in Dublin, the sun's diameter being taken as 1·00) was very well seen. On Wednesday, the second great atmospheric disturbance of the week came in over the S.W. of Ireland, thence travelling towards E.N.E. across this country and the North of England to the North Sea. Under its influence the weather remained broken, rainy, and cold to the end of the week. In Dublin the mean height of the barometer was only 29·130 inches, pressure ranging from 28·632 inches at 4.45 a.m. of Thursday (wind, N.W.) to 29·586 inches at 9 p.m. of Saturday (wind, N.) The corrected mean temperature was 43·5°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 42·4°. On Sunday the screened thermometers rose to 55·5°; on Thursday they fell to 34·9°. Rain fell on every day, the total measurement being 1·334 inches, including ·569 inch on Wednesday. Hail fell on Sunday, Monday, and Friday; sleet on Monday and Thursday. The most prevalent wind was the N.W.

Printed image digitised by the University of Southampton Library Digitisation Unit

Sunday, the 31st, was a cold, changeable, showery day. Hail fell in the afternoon, and the N. wind blew freshly.

The rainfall in Dublin during the three months ending March 31st amounted to 9·084 inches on 52 days, compared with 6·028 inches on 53 days in 1894, 5·196 inches on 49 days in 1893, 4·808 inches on 48 days in 1892, only 1·650 inches on but 32 days in 1891, 7·470 inches on 45 days in 1890, 5·738 inches on 53 days in 1889, 6·097 inches on 41 days in 1888, and a twenty-five years' average of 6·411 inches on 51·0 days (1865–1889, inclusive).

At Knockdolian, Greystones, Co. Wicklow, 3·140 inches of rain fell on 20 days during March; and the total rainfall since January 1, 1895, equals 10·095 inches on 44 days The corresponding figures for 1894 are 1·505 inches on 14 days, the total rainfall since January 1 having been 8·285 inches on 53 days.

The rainfall in March at Cloncevin, Killiney, Co. Dublin, was 3·29 inches on 21 days, compared with 1·11 inches on 14 days in 1894, ·26 inch on 9 days in 1893, ·98 inch on 10 days in 1892, and a ten years' average of 1·658 inches on 13·9 days The maximum in the 10 years was 3·59 inches in 1888, the minimum was ·26 inch in 1893. At this station the total rainfall since January was 9·68 inches on 52 days, compared with a fall of 5·79 inches on 51 days in the first quarter of 1893, and 5·56 inches on 55 days in that of 1894.

April.—Speaking generally, April, 1895, was a favourable and an "average" month. The wind was singularly variable, blowing from all points of the compass in nearly equal proportion. The distribution of atmospheric pressure was for the most part cyclonic, but at Eastertide a large anticyclone lay over the British Islands and the North Sea for several days. This high pressure caused nipping easterly wind, but fine, dry weather.

In Dublin the arithmetical mean temperature (48·1°) was 0·4° above the average (47·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 47·8°. In the thirty years ending with 1894, April was coldest in 1879 (the cold year) (M. T.=44·5°), and warmest in 1893 (M. T.=51·4°). In 1886 the M. T. was 46·3°, in 1887 it was as low as 45·1°, in 1888 it was (as also in 1891) only 45·7°, in 1889, 46·1°; in 1890, 47·3°; in 1892, 46·2°; and in 1894, 49·9°. The month of April, 1893, was the warmest for at least 30 years.

The mean height of the barometer was 29·863 inches, or 0·013 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·479 inches at 9 p.m. of the 11th, having fallen to 29·287 inches at 4·45 p.m. of the 6th. The observed range of atmospheric pressure was, therefore, 1·192 inches—that is, a little less than an inch and two-tenths.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 47·8°, or 4·8° above the value for March, 1895. Using the formula, *Mean Temp.* $=Min.+(max.-min.\times 476)$, the value is also 47·8°, or 0·4° above the average mean temperature for April, calculated in the same way, in the twenty-five years, 1865–89, inclusive (47·4°). The arithmetical mean of the maximal and minimal readings was 48·1°, compared with a twenty-five years' (1865–1889 inclusive) average of 47·7°. On the 21st the thermometer in the screen rose to 64·0°—wind, S.W.; on the 4th the temperature fell to 32·9°—wind, calm. The minimum on the grass was 27·8° on the 5th There were 5 frosty nights on the grass.

The rainfall was 1·149 inches, distributed over 13 days. The average rainfall for April in the twenty-five years, 1865–89, inclusive, was 2·055 inches, and the average number of rainy days was 15·2. The rainfall, therefore, was considerably below the average, while the rainy days were also in defect. In 1877 the rainfall in April was very large—4·707 inches on 21 days; in 1882 also, 3·526 inches fell on 20 days, and in 1894, 3·123 inches on 20 days. On the other hand, in 1873, only ·498 inch was measured on 8 days; and in 1870, only ·838 inch fell, also on 8 days. The fall in 1890 was 1·575 inches on 14 days, in 1891, 1·553 inches on 14 days, in 1892, 1·114 inches on 13 days, and in 1893, 1·046 inches on 7 days.

No halos or fogs were observed. High winds were noted on 9 days, but never reached the force of a gale in Dublin. Sleet and hail fell on the 1st, hail also on the 11th. The temperature exceeded 50 in the screen on every day except 6, compared with every day but 1 in 1894, every day in 1893, 24 days in 1892, and 18 days in 1891. As in April, 1894, it rose to or above 60° on only 3 days, but never fell to 32° in the screen The minimum on the grass was 32°, or less, on five nights, compared with five nights in 1893, and only one night in 1894. The mean lowest temperature on the grass was 37·8°, compared with 40·0° in 1894, 38·2° in 1893, 32·4° in 1892, 34·1° in 1891 and 1890, 34·4° in 1889, 34·6° in 1888, and 31·6° in 1887. There was an aurora borealis on the evening of the 11th.

Until Friday, the 5th, polar winds prevailed and temperature ruled low, the nights being even frosty. On the day named a large atmospheric depression approached Ireland and Scotland from the Atlantic, and under its influence clouds increased, temperature rose, the wind backed towards S.W. and freshened, and rain fell from time to time. Early on Monday, the 1st, cold rain and sleet fell in Dublin, and there was a heavy hail shower at 11.30 a.m. The weather then remained fine and dry, but cold for the time of year, until Friday. During this period a deep depression passed across Scandinavia, where snow and frost resumed their sway. In Scotland also snow or sleet fell, and sharp night frosts occurred. At 8 a.m. of Friday a broad band of high barometer—30·2 inches and upward—stretched from the S. of Ireland across England to France and Switzerland, but pressure had begun to give way briskly in the N.W. On Saturday the barometer stood about an inch lower in Dublin than it had done on Thursday evening, and the centre of a deep depression lay over the N. of Scotland, where the barometer was down to 28·82 inches. In Dublin the barometer rose to 30·288 inches at 9 p.m. of Thursday (wind, calm), and fell to 29·287 inches at 4.45 p.m. of Saturday (wind, W.N.W) On Thursday the screened minimum sank to 32·9°. On Saturday, the screened

maxim... prevailing wind was northerly up to Friday, then W.S.W. The rainfal... um rose to 52.7°. The ...ays, ·041 inch being measured on both Friday and Saturday.

Fav... l was ·106 inch on three ...ed the week ended Saturday, the 13th. It is true that the condit... ourable weather character... essure or of air temperature were not stable; nevertheless the weathe... ons either of atmospheric pr... r was dry, and there were inte...vals of pleasant, warm sunshine, which gave a considerable impetu... to vegetation. Speaking generally, the barometer stood low, and a cyclonic distribution of press... ure prevailed at the beginning of the period, whereas a high barometer and anticyclonic condition... ns held at its close. On Sunday morning, two areas of low pressure, in which the barometer was down to 28·60 inches, lay over the southern half of Scandinavia, and several inequalities of pressure were observed at the British and Irish Stations. The weather was consequently cold and showery, with northerly winds. During the next three days depressions moved northwards or north-eastwards outside our N.W. coasts, causing fresh S.W. to W. winds and changeable weather. The S.W. wind brought genial warmth for a short while, and on Tuesday the thermometer rose above 60°—to 60·8—in the screen for the first time in Dublin since November 1, 1894, on which day the maximum had been 61·6°. On Thursday an area of high pressure came in from the Atlantic, and by evening the barometer rose to 30·50 inches and upwards in the S. of Ireland. Temperature fell fast at night, and ground frost was felt. Good Friday proved cloudy and cool, but Saturday became brilliant as the day advanced. In Dublin the mean height of the barometer was 29·994 inches, pressure having been only 29·473 inches at 9 a.m. of Sunday (wind, N.N.W.), but rising to 30·479 inches at 9 p.m. of Thursday (wind, N.W.) The corrected mean temperature was 48·3°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 47·9°. On Tuesday the thermometer rose to 60·8°, on Friday it fell to 35·5° in the screen. The prevalent winds were S.W. and N.W. Very light showers fell on several days, but the resulting rainfall was only ·003 inch—a quantity which is not considered registrable.

Favourable, springlike weather prevailed during the week ended Saturday, the 20th. On Sunday and Monday, the British Isles were entirely under the influence of an anticyclone, the centre of which was off the east of Scotland at 8 a.m. of Sunday, when the barometer read 30·40 inches at Aberdeen, 30·18 inches at Valentia Island, and 30·09 inches in the Scilly Isles. Easterly winds, and cold, dry, generally bright weather prevailed. In Dublin the mean temperature of Easter Day was only 44·1°, or 5·8° below that of last Christmas Day, which was, however, unusually mild, the mean temperature being 49·9°. At the beginning of the week a depression lay over Spain and Portugal, where thunderstorms and heavy rain occurred. This disturbance moved northwards, reaching the Bay of Biscay on Tuesday and—in a modified form—the British Islands on Thursday. Thunderstorms accompanied the passage of its eastern side across France on Tuesday and England on Wednesday. As this disturbance travelled northwards the wind shifted to W. in its rear, and the air became much milder and more humid than of late, while genial showers fell in most districts. On Saturday a new depression, with steeper baric gradients, came in over Ireland from S.W., causing freshening southerly winds, clouds, and finally rain. In Dublin the mean atmospheric pressure was 29·880 inches, the barometer reading as high as 30·310 inches at 9 a.m. of Sunday (wind, E.), but only 29·595 inches at 7 a.m. of Thursday (wind, W.S.W.). The corrected mean temperature was 48·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 48·1°. On Monday the screened thermometers sank to 38·2°; on Friday they rose to 58·7°. Rain fell on two days to the amount of ·063 inch, ·043 inch being measured on Saturday. The wind was at first easterly, then westerly, and finally southerly.

During the week ended Saturday, the 27th, exceedingly changeable, showery or rainy, and finally cold, weather prevailed. Over the British Isles and in their immediate neighbourhood the distribution of atmospheric pressure remained cyclonic—after Wednesday it became very complex, a number of areas of low pressure being observed at the same time. As always happens when this is the case, there was a considerable mingling of easterly and south-westerly air-currents, causing very unstable temperature. Sunday was at first mild and pleasant, the thermometer rising in the shade to 64° in Dublin and in some English towns (to 65° at Cambridge). In the evening heavy showers fell. Monday turned out wet owing to the passage northwards outside the West of Ireland of a large Atlantic depression. Tuesday was fine to showery, thunder occurring in the North of Ireland. Wednesday was rainy and cold. On Thursday morning centres of low pressure were found over Caithness and the English Channel and to the southward of Ireland. Thunderstorms occurred in France and subsequently at Roche's Point, Cork Harbour. Friday proved squally, wet, and cold; but on Saturday the weather improved, becoming drier and brighter while continuing cold. In Dublin the mean height of the barometer was 29·583 inches, the range being from 29·299 inches at 9 p.m. of Monday (wind, S.S.W.) to 29·991 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 50·7°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 49·7°. On Sunday the screened thermometers rose to 64·0°; on Thursday they fell to 42·1°. The rainfall measured ·797 inch on six days, ·252 inch falling on Friday. The wind was variable in both force and direction—it was chiefly S.W. at first, afterwards N.N.W. On Saturday evening a conjunction of Venus and the crescent moon formed a beautiful sight in the western sky after sunset.

Sunday, the 28th, was cool and fair to cloudy at times. On Monday, the 29th, the weather was mild but changeable. On Tuesday, the 30th, it was cloudy to overcast and finally very wet.

The rainfall in Dublin during the four months ending April 30th amounted to 10·233 inches on 65 days, compared with 9·151 inches on 73 days in 1894, 6·242 inches on 56 days in 1893, 5·922 inches on 61 days in 1892, only 3·203 inches on 46 days in 1891, 9·045 inches on 59 days in 1890, 8·345 inches on 74 days in 1889, 8·090 inches on 58 days in 1888, and a twenty-five years' average of 8·466 inches on 66·2 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 2·475 inches on 10 days. The heaviest falls in 24 hours were ·690 inch on the 22nd, ·530 inch on the 25th, and ·450 inch

Printed image digitised by the University of Southampton Library Digitisation Unit

on the 20th. In 1894, the April rainfall at this station was 4·171 [illegible] 1893, it was 1·055 inches on 5 days. The total rainfall in 1895 up to April 30 was 2·570 inches on 17 days; in 1894 it was 2·570 inches on 54 days, compared with 12·456 inches on 70 days in 1894 and 8·53[illegible] inches on 24 days in 1893.

At Cloneevin, Killiney, Co. Dublin, 1·60 inches of rain fell on 14 days in April. The maximal fall in 24 hours was ·37 inch on the 22nd. The average rainfall in April of the ten preceding years was 1·716 inches on 13·2 days. Since January 1, 1895, 11·28 inches of rain fell at this station on 66 days, compared with 9·09 inches on 74 days in 1894, and 6·94 inches on 57 days in 1893.

MAY.—A beautiful month—bright and dry, without any severe nipping night frosts. Prevalent easterly sea breezes by day along the east coast of Ireland tempered the heat of an often cloudless sun. The amount of cloud was very low—only 37·3 per cent. At 9 a.m. it rose to 47·1 per cent., but at 9 p.m. it fell to 27·4 per cent.. Rain fell in Dublin on only 3 days, and the total measurement was only about one-sixth of an inch, or slightly over one-twelfth of the average rainfall for May.

In Dublin the arithmetical mean temperature (54·3°) was decidedly above the average (52·0°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 53·8°. In the thirty years ending with 1894, May was coldest in 1869 (M. T. = 48·2°); in 1885 (M. T. = 48·7°); in 1879 (the "cold year") (M. T. = 48·8°); and in 1894 (M. T. = 49·2°). It was warmest in 1893 (M. T. = 56·7°); in 1868 (the "warm year") (M. T. = 55·8°); and in 1875 (M. T. = 54·9°). In 1886 the M. T. was 50·5°; in 1887, 51·8°; in 1888, 52·5°; in 1889, 54·6°; in 1890, 53·2°; in 1891, only 49·6°; and in 1892, 53·8°.

The mean height of the barometer was 30·111 inches, or 0·122 inch above the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·614 inches at 9 a.m. of the 2nd, and fell to 29·436 inches at 11 p.m. of the 31st. The observed range of atmospheric pressure was, therefore, 1·178 inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 53·8°, or 6·0° above the value for April, 1895 (47·8°). Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the value was also 53·8°, or 2·2° above the average mean temperature for May, calculated in the same way, in the twenty-five years, 1865–89, inclusive (51·6°). The arithmetical mean of the maximal and minimal readings was 54·3°, compared with a twenty-five years' average of 52·0°. On the 30th the thermometer in the screen rose to 71·9°—wind, E.; on the 21st the temperature fell to 36·2°—wind, E.S.E. The minimum on the grass was 31·9°, also on the 21st.

The rainfall amounted to only ·177 inch, distributed over only 3 days, thus establishing a record for dryness. The average rainfall for May in the twenty-five years, 1865–89, inclusive, was 2·030 inches, and the average number of rainy days was 15·4. The rainfall and the rainy days, therefore, were much below the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1871, only ·378 inch was measured on 9 days; in 1876, only ·798 inch fell on 6 days; in 1887, only ·882 inch on 10 days; and in 1888, only ·978 inch on 11 days. In 1890, 2·438 inches fell on 17 days. In 1891 May was the first month in which the rainfall exceeded the average. It amounted to 2·792 inches on 17 days. In 1892 the large amount of 4·177 inches fell on 19 days. In 1893 the fall was 1·666 inches on 10 days; and in 1894, 3·558 inches on 17 days.

Solar halos were seen on the 3rd and 4th, lunar halos on the 2nd, 3rd, and 9th, and an aurora on the 2nd. High winds were noted on only 3 days, attaining the force of a gale on the 31st only. Thunder was heard on the 1st and 24th. Hail and sleet fell on the 1st. The atmosphere was slightly foggy on the 3rd and 4th.

During the month the thermometer did not fall below 32° in the screen, but it indicated frost on the grass on the night of the 21st. The mean minimal temperature on the grass was 41·8°, compared with 37·6° in May, 1894; 45·6° in 1893, 41·3° in 1892, 37·7° in 1891, 42·2° in 1890, 42·4° in 1889, 37·5° in 1888, and 37·9° in 1887.

The period ended Saturday, the 4th, was changeable, but for the most part favourable. The nights were generally very cold, but bright sunshine raised the temperature in the daytime so considerably that the daily range on some occasions amounted to between 20° and 30° at some inland stations—in London, on Thursday the 2nd, max. 64°, min. 35°, range 29°; at Parsonstown, on Friday, the 3rd, max. 61°, min. 36°, range 25°. On Wednesday, the 1st, splendid clouds formed and thunder and hail showers occurred in the east of Ireland. In Dublin two peals of thunder were heard about 2.p.m., followed by a heavy shower of soft hail and sleet. The barometer at that time rose fast and an anticyclone with central readings above 30·60 inches became established over the British Islands. A good deal of cirriform cloud formed, in which solar halos by day and lunar halos by night were developed. The air was very "thin" and nipping on Thursday and Friday, but it became softer and more genial on Saturday. In Dublin the barometer rose to 30·614 inches at 9 a.m. of Thursday (wind, W.). On Saturday the thermometers rose to 62·7° in the screen, having fallen to 38·2° on Friday. Rain fell on the 1st to the amount of ·038 inch. Easterly winds were the most prevalent.

Exceptionally fine, dry, bright weather prevailed during the week ended Saturday, the 11th. Temperature, in particular, showed a decided advance, and the evenings were for the most part summerlike. Until Wednesday North-Western Europe was covered by a large area of high atmospheric pressure (anticyclone), with slight or moderate gradients. On Monday and Tuesday the barometer stood as high as 30·70 inches, or slightly more, over Scandinavia. Light, variable winds prevailed, except on the Continent and in the S.E. and S. of England, where a fresh north-easterly breeze was blowing. The amount of cloud was small, so that much bright sunshine was recorded by day, while the nights were very sharp. As the week advanced, shallow depressions, of irregular

and cha... northwards across France and the Bay of Biscay from the Peninsula. These ... inging shape, advanced ... y rains in the South of France and thundershowers later on in several ... disturbances caused heav... d of the Continent. No general break-up of the weather, however, oc... parts of the British Isles a... tribution of atmospheric pressure again became anticyclonic. The am... curred, and on Friday the dist... unusually large—in London, 80·3 hours; at Cambridge, 88·3 hours or... ount of bright sunshine was ...83 per cent. of its possible duration; in the Phœnix Park, Dublin, 66·1 hours; at Markree Castle, t... 2 8 hours; at Armagh, 60 0 hours; at Parsonstown, 58·4 hours, and at Valentia Island, 54·0 hours. In Dublin the mean height of the barometer was 30·188 inches, pressure falling from 30·427 inches at 9 p.m. of Sunday (wind, E.) to 29·900 inches at 7 p.m. of Wednesday (wind, also E.). The corrected mean temperature was 53·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 53·7°. On Monday the screened thermometers sank to 40·9°; on Saturday they rose to 63·8°. The prevailing wind was easterly. There was no measurable rainfall. On Thursday the thermometer rose to 76° in the shade in London and at Cambridge.

During the week ended Saturday, the 18th, the weather was by no means as settled as in the previous week, but the prevailing character of dryness was maintained, especially in Ireland. At first temperature was high—the thermometer rising in London to 79° on Sunday, 78° on Monday, and 75° on Tuesday; but it afterwards fell away greatly, so that the last three days were really cold. This decided change was brought about by the substitution of an area of low atmospheric pressure for one of high pressure over the S. of Scandinavia, Denmark, and the Netherlands. In this region the barometer stood at 30·3 inches on Sunday morning, but only at 29·2 inches on Thursday morning. On Sunday a large, but shallow, depression lay over Ireland, where a grateful fall of soft, warm rain occurred in the course of the day. Monday was a warm day, the thermometer marking 67·7° in Dublin and 69° at Parsonstown. Tuesday was ushered in by a vapour fog, but this soon dispersed and fair, warm weather prevailed. At this time a depression was advancing from N.W. to the N. of Scotland, whence it passed south-eastwards to Denmark, growing much deeper as it travelled. Under the influence of this disturbance, the wind veered to N. and freshened, with a serious fall of temperature, an increase of cloud, and in Great Britain showers of cold rain, sleet, and hail. May—in a word—gave place to March. On Friday the air was particularly dry and searching. In Dublin the mean height of the barometer was 30·106 inches, pressure ranging from 30·373 inches at 9 a.m. of Tuesday (wind W.) to 29·820 inches at 7.30 a.m. of Saturday (wind W.N.W.). The corrected mean temperature was 55·0°. The mean dry bulb readings at 9 a.m. and 9 p.m. were 54·1°. On Monday the screened thermometers rose to 67·7°, on Saturday they fell to 39·0°. Rain fell on Sunday to the amount of ·068 inch. The prevalent winds were—first, W., afterwards N.

Exceptionally fine weather prevailed throughout the week ended Saturday, the 25th. In Dublin the period was rainless, but in many parts of Great Britain and Ireland thundershowers occurred in the latter half of the week. On Sunday morning a rather deep depression was found lying over Holland, Denmark, and Belgium—at 8 a.m. its centre was near the Hague. This system caused cold northerly winds in the British Isles and showers at many places in Scotland and England—in Ireland the weather was generally dry but cold. After Sunday, atmospheric pressure became comparatively uniform over Western Europe, but several shallow depressions developed here and there, causing local electrical disturbances in many places. On Wednesday evening a sharp thunderstorm broke over Paris, where the resulting rainfall was as much as ·67 inch. On Thursday a thunderstorm occurred in London and thundershowers fell in many parts of England. Similarly on Friday, electrical cumuli and cirro-cumuli came up from S. to the westward of Dublin, and in the afternoon heavy thundershowers occurred a few miles inland, the weather remaining fine and dry in the city and along the coast. Saturday was a bright, warm day, with a moderate to fresh westerly wind. In Dublin the mean height of the barometer was 29·894 inches, pressure falling to 29·748 inches at 7 p.m. of Tuesday (wind, S.E.) and rising to 30·107 inches at 9.15 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 51·8°. The mean dry bulb reading at 9 a.m. and 9 p.m. was also 51·8°. On Tuesday morning the thermometer sank to 36·2° in the screen and to 31·9° on the grass in Dublin. The maximum was 64·7° on Thursday. On the first three days temperature failed to reach 60° in the shade. Easterly winds prevailed except on Saturday. There was no rainfall in the city—at Glen-na-Smoel Water-works ·75 inch of rain fell in Friday's thunderstorm.

Very fine, summerlike weather prevailed during the greater part of the period from the 26th to the 31st inclusive, but after a burst of heat on Thursday, the 30th, thunderstorms and rain occurred in Great Britain and rain with strong southerly winds in Ireland. Until Wednesday, atmospheric pressure ruled high in the British Islands, and the weather was anticyclonic in character—that is, fine, dry, and bright. Off the S.E. coast of England, much fog prevailed at this time, and temperature in consequence remained very low—on Monday the thermometer did not exceed 49° at the North Foreland, whereas it rose to 74° in London and at Cambridge, and to 75° at Loughborough and Oxford. In the centre and west of Ireland on this day much cloud prevailed and slight showers fell in places. On Wednesday a decided fall of the barometer set in and gradients for southerly winds became somewhat steep. With the coming of the S. wind temperature rose fast—the maxima on Thursday being 72° in Dublin, 77° at Parsonstown, 80° in Liverpool, 82° at York, 83° at Oxford and Loughborough, 85° in London, and 87° at Cambridge. Thunderstorms followed in nearly all parts of England, and at Cambridge rain and hail fell to the amount of 1·01 inches. On Friday, the 31st, the S. wind blew freshly in Dublin, and at 9.30 p.m. rain fell heavily for a short time, the wind afterwards freshening to a gale of brief duration. At 11 p.m. the barometer fell to 29·436 inches. In Dublin the barometer rose to 30·341 inches at 9 a.m. of Monday (wind, E.) and fell to 29·436 inches at 11 p.m. of Friday (wind, S.S.E.) On Wednesday the thermometer fell to 46·1° in the screen, on Thursday it rose to 71·0°. The rainfall was ·070 inch on Friday only. The prevalent winds were E. and S.E.

Printed image digitised by the University of Southampton Library Digitisation Unit

The rainfall in Dublin during the five months ending May 31st amounted to 10·410 inches on 68 days, compared with 12·709 inches on 90 days in 1894, 7·908 inches on 80 days in 1892, only 5·995 inches on 63 days in 1893, 10·099 inches on 80 days in 1892, only 5·995 inches on 63 days in 1891, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1890, 11·483 inches on 66 days in 1887, 10·476 inches on 91 days in 1889, 9·068 inches on 69 days in 1888, 6·489 inches on 62 days in 1887, and a twenty-five years' average of 10·496 inches on 81·6 days.

It may be remembered that on Saturday, May 28th, 1892, 2·050 inches of rain were measured at this station, 1·900 inches having fallen within 6 hours, or at the rate of [illegible] inches in 24 hours. No such measurement had been recorded in Dublin since October 27, 1880, when 2·750 inches of rain fell May 28, 1892, was only the third occasion within the past thirty years on which the rainfall exceeded 2 inches within 24 hours in Dublin.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in May, 1895, was 0·275 inch, distributed over only 4 days. Of this quantity ·100 inch fell on the 31st. The total fall since January 1st, 1895, equals 12·845 inches on 58 days, compared with 15·696 inches on 85 days in 1894, and 9·565 inches on 65 days in 1893.

At Cloneevin, Killiney, Co. Dublin, the rainfall in May was 0·12 inch on 3 days—0·04 inch being measured on the 1st, 12th, and 31st respectively. The average rainfall in May at this station for the ten years, 1885–1894 inclusive, was 2·45 inches on 15 days. Five rainy days was the lowest number which had been observed in any month previously.

JUNE.—This was an exceptionally favourable month. Fair and quiet weather held until the 26th, hot sunshine by day being often succeeded by calm cold nights, especially about the 13th, when severe frosts occurred in the inland districts of both Great Britain and Ireland. From the 26th to the close, violent electrical disturbances took place and rain fell in abundance except in the South-east of England. This break-up of the fine weather and long-continued drought was preceded by a period of great warmth, particularly in Ireland.

In Dublin the arithmetical mean temperature (59·2°) was above the average (57·8°) by 1·4°; the mean dry bulb readings at 9 a.m. and 9 p.m. were 58·6°. In the thirty years ending with 1894, June was coldest in 1882 (M. T.=55·8°), and in 1879 (the "cold year") (M. T.=55·9°). It was warmest in 1887 (M. T.=62·3°), in 1865 (M. T.=61·0°), and in 1868 (the "warm year") (M. T.=60·5°). In 1888 the M. T. was 56·2°, in 1889, 59·5°, in 1890, 58·1°; in 1891, 59·0°; in 1892, 56·7°, in 1893, 59·9°; and in 1894, 57·0°.

The mean height of the barometer was 30·084 inches, or 0·167 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·466 inches at 9 a.m. of the 24th, and fell to 29·557 inches at 9 p.m. of the 30th. The observed range of atmospheric pressure was, therefore, 0·909 inch—that is, a little more than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·6°, or 4·8° above the value for May, 1895. Using the formula, *Mean Temp.=Min.+(max.−min.×·465)*, the value was also 58·6°, or 1·4° above the average mean temperature for June, calculated in the same way, in the twenty-five years, 1865–89, inclusive (57·2°). The arithmetical mean of the maximal and minimal readings was 59·2°, compared with a twenty-five years' average of 57·8°. On the 26th the thermometer in the screen rose to 77·6°—wind, E.S.E.; on the 15th the temperature fell to 42·3°—wind, E. The minimum on the grass was 38·8° also, on the 15th.

The rainfall amounted to 1·872 inches, distributed over 12 days. The average rainfall for June in the twenty-five years, 1865–89, inclusive, was 1·817 inches, and the average number of rainy days was 13·8. The rainfall was, therefore, slightly above, while the rainy days were more decidedly below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879 also 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days; in 1887, the rainfall was only ·252 inch, distributed over only 5 days; in 1874, only ·405 inch was measured on 9 days, and in 1868 only ·677 inch fell on but 6 days. In 1888 the rainfall was as much as 3·045 inches, distributed over as many as 18 days. In 1890 it was 1·930 inches on 18 days; in 1891, 2·753 inches on 14 days; in 1892, 1·671 inches on 17 days; in 1893, 1·716 inches on 12 days; and in 1894, 1·652 inches on 19 days.

High winds were noted on only 4 days, and the force of a gale was never attained. Temperature reached or exceeded 70° in the screen on 7 days; compared with 17 days in 1887, only 1 day in 1888, 10 days in 1889, only 2 days in 1890, 6 days in 1891, 4 days in 1892, 5 days in 1893, and only 2 days in 1894. Hail fell on the 12th and 29th. Solar halos were observed on the 3rd, 8th, 11th, 13th, and 23rd. Thunderstorms occurred on the 26th, 29th, and 30th.

Saturday, the 1st, was a fair bright day, with a pleasant and fresh breeze from S. to S.E. and E.S.E.

Splendid, summerlike weather prevailed during the greater part of the week ended Saturday the 8th. After Sunday the distribution of atmospheric pressure over the British Isles was anticyclonic—the highest pressure of all being found over Ireland on and after Tuesday. At 8 a.m. of Sunday a depression, in which the barometer was down to 29·69 inches, was found near the Scilly Islands; another, with readings of about 29·80 inches, lay off the Lincolnshire coast. The latter disturbance had already caused a heavy fall of rain at Spurn Head (·58 inch) and York (1·24 inches) and a thunderstorm at the latter place. Thunder and lightning had also occurred at the North Foreland and Cambridge. In Dublin the day was fine and warm, but cloudy at times. The depression soon dispersed and a general increase of pressure took place. Monday was fair and bright until evening, when clouds came up from N. and rain fell heavily in Dublin for a time (·103 inch). The downpour was local and resembled an effete thunderstorm. Light evaporation showers fell on Tuesday, but the rainfall measurement was scarcely perceptible. A spell of brilliant, calm, warm weather followed, lasting until Saturday, when clouds increased and the sky began to wear a less settled appearance.

Printed image digitised by the University of Southampton Library Digitisation Unit

as depressions appeared in the far North. At 1 30 p.m. on this day a well-defined solar halo appeared. During the fair spell light easterly sea breezes came in daily along the east coast, tempering the burning rays of an unclouded summer sun. On Thursday evening Venus and Mars were seen in conjunction to W.N.W., and Jupiter and Mercury also in conjunction to N.W. In Dublin the mean height of the barometer was 30 268 inches, pressure ranging between 29·919 inches at 9 a.m. of Sunday (wind, N.E.) and 30·430 inches at 9 a.m. of Thursday (wind, E.N.E.). The corrected mean temperature was 58·9°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 59·9°. On Wednesday the screened thermometers fell to 47·9°, on Friday they rose to 70·7°. The rainfall was ·107 inch, ·103 inch being measured on Monday—the only "rainy day." The prevailing winds were N.N.W. and E.N.E.

Although changeable at times, the weather of the week ended Saturday, the 15th, was generally seasonable and propitious. As a rule, the barometer stood highest over Ireland while it was relatively low both over Northern Europe and in the Mediterranean Basin. At no time, however, were gradients steep and so the force of the wind was never great. With the spreading southwards of north-westerly winds early in the week came a remarkable reduction of temperature, and the thermometer readings by night in Scotland and Ireland were unusually low after Monday—at Wick, for example, the minima in the screen were 53°, 43°, 42°, 37°, 39°, 35°, and 34°; even in the city of Dublin, they were as low as 51·8°, 51·9°, 49·0°, 42·5°, 42·9°, 48·9°, and 42·3°. At Edenfel (Omagh) and Markree (Co. Sligo) the sheltered thermometer fell to 30° on Thursday, the 13th. The grass minimum was 24° at Edenfel, on the same night. On Friday night the thermometer fell to 32° in the screen and to 26° on the grass at Loughborough. In Dublin, heavy showers fell on Tuesday and Wednesday, largely in consequence of a rapid evaporation and the coldness of the air leading to subsequent condensation. Hail fell on Wednesday. On Thursday and Friday a shallow depression passed eastwards along the south coast of Ireland and across the south of England. It produced an abundant rainfall in Munster and along the English coast. At this time, beautiful bright weather with cool, easterly sea breezes prevailed in the neighbourhood of Dublin. The mean atmospheric pressure in this city was 30·123 inches, the barometer being observed to range from 29·992 inches at 9 a.m. of Tuesday (wind, W.N.W.) to 30·237 inches at 9 a.m. of Saturday (wind, E.). The corrected mean temperature was 54·4°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 55·3°. On Monday the screened thermometers rose to 66·8°, on Saturday they fell to 42·3°. The rainfall was ·323 inch on two days, ·192 inch being registered on Wednesday. The prevalent winds were first N.W., afterwards E.

Although far from settled, the weather of the week ended Saturday, the 22nd, was generally favourable, and at the end of the week a rapid and considerable rise of temperature took place. The first two days were fair—clear, cold nights were succeeded by brilliant sunshine by day, the heat of the sun being tempered meanwhile by sea breezes along the Irish coasts. During this time the barometer was gradually falling and on Tuesday morning a large area of comparatively low pressure lay over the British Isles, the North Sea, and the Bay of Biscay. Within this area at least three minima existed, and the weather therefore fell into a rainy, thundery state. In Dublin a grateful fall of rain took place between 7 and 10 a.m. on Tuesday, but the measurement was only ·040 inch. The changes in atmospheric pressure were slight and irregular until Wednesday evening, when the depressions began to fill up or disperse. On Thursday morning areas of high pressure were found over Scandinavia and the Peninsula, while the barometer was relatively low in the intervening regions. A good deal of electrical disturbance was the result. Subsequently the Spanish anticyclone spread northwards and the weather became very fine and warm, as its south-westerly winds passed over Ireland. In Dublin the mean height of the barometer was 30 011 inches, pressure ranging between 29·694 inches at 4 30 p.m. of Tuesday (wind, W.) and 30 315 inches at 9 p.m. of Saturday (wind, W.S.W.). The corrected mean temperature was 56·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 56·4°. On Monday the screened thermometers fell to 44·0°; on Saturday they rose to 75·1°. The rainfall was ·114 inch on four days, ·052 inch being measured on Thursday as the result of heavy electrical showers ushered in by a dangerous S.W. squall at 6 30 p.m. The prevailing winds were N.W. and S.W.

At first dry and hot in the week ending Saturday, the 29th, the weather broke on Wednesday, with severe thunderstorms in most parts of the British Islands, and remained unsettled, showery and thundery to the close of the week. In the period from Sunday to Tuesday inclusive an atmospheric depression was passing in an east-south-easterly direction across Scandinavia and the Baltic to Poland. This system caused considerable rains, northerly gales, and a great fall in temperature all over Northern Europe, but fine weather was general throughout the British Isles, although it was cool in Scotland and the North of England. In Ireland and the South of England summer heat prevailed, the sheltered thermometer rising to 82° in London on Sunday and at Parsonstown on Monday. On Tuesday the barometer stood above 30·4 inches in a ridge extending southwards from the N.E. of Scotland to the neighbourhood of Paris. Off the West of Ireland pressure was slightly lower (30·3 inches) and was giving way. At night the weather became thundery in the last named district, and on Wednesday violent thunderstorms occurred in Ireland, in central and northern England, and in Scotland. In the S.E. of England the weather remained for the most part fine and dry until Friday, when showers fell locally. In Dublin the mean height of the barometer was 30·056 inches, pressure decreasing from 30·466 inches at 9 a.m. of Monday (wind, E.) to 29·560 inches at 9 p.m. of Saturday (wind, W.). The corrected mean temperature was 65·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 63·0°. On five days the maximal temperature exceeded 70° in the screen, the highest reading of all being 77·6° on Wednesday. The minimum was 54·0° on Saturday. The rainfall was ·687 inch on four days, ·262 inch being registered on

Printed image digitised by the University of Southampton Library Digitisation Unit

Wednesday. Hail fell on Saturday, when thunder also was heard. The prevalent winds were at first E., then S.W.

On Sunday, the 30th, a succession of thunderstorms passed over Dublin from S. to N. and rain fell in torrents at frequent intervals, the total measurement being ·641 inch.

The rainfall in Dublin during the six months ending June 30th amounted to 12·282 inches on 80 days, compared with 14·361 inches on 109 days in 1894, 9·624 inches on 78 days in 1893, 11·770 inches on 97 days in 1892, 8·748 inches on 77 days in 1891, 13·413 inches on 94 days in 1890, 10·576 inches on 97 days in 1889, 12·113 inches on 87 days in 1888, 6·741 inches on 67 days in 1887, and a twenty-five years' average of 12·313 inches on 95·4 days.

At Knockdolian, Greystones, Co Wicklow, the rainfall in June, 1895, was 1·425 inches, distributed over 9 days. Of this quantity ·365 inch fell on the 26th, and ·355 on the 27th. The total fall since January 1 has been 14·270 inches on 67 days, compared with 17·381 inches on 96 days in the first six months of 1894, and 11·776 inches on 75 days during the corresponding period in 1893.

The rainfall at Cloneevin, Killiney, Co. Dublin, amounted to 1·94 inches on 12 days. The greatest fall in 24 hours was ·52 inch on the 26th. The average rainfall for June in 10 years was 1·460 inches on 11·6 days. Since January 1, 1895, 13·34 inches of rain have fallen at this station on 81 days.

JULY.—A very changeable, showery, and windy as well as a cool month, with a large rainfall at the beginning and close, and a decided prevalence of winds from westerly points—N.W., W., and S.W.

In Dublin the arithmetical mean temperature (59·2°) was markedly below the average (60·6°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 58·0°. In the thirty years ending with 1894, July was coldest in 1879 (the "cold year") (M.T. = 57·2°). It was warmest in 1887 (M. T. = 63·7°), and in 1868 (the "warm year") (M. T. = 63·5°). In 1886 the M. T. was 61·0°; in 1888 it was as low as 57·3°; in 1889 it was 58·7°; in 1890, 58·1°; in 1891, 59·0°; in 1892, 57·8°; in 1893, 61·6°; and in 1894, 60·3°. From this, July, 1887, proves to have been the warmest since the present records commenced, whilst July, 1879, was the coldest.

The mean height of the barometer was 29·837 inches, or 0·078 inch below the corrected average value for July—namely, 29·915 inches. The mercury marked 30·281 inches at 9 a.m. of the 4th, and fell to 29·341 inches at 9 a.m. of the 21st. The observed range of atmospheric pressure was, therefore, 0·940 inch—that is, a little more than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·0°, or 0·6 below the value for June, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·465), the value was 58·7°, or 1·5° below the average mean temperature for July, calculated in the same way, in the twenty-five years, 1865–89, inclusive (60·2°). The arithmetical mean of the maximal and minimal readings was 59·2°, compared with a twenty-five years' average of 60·6°. On the 6th the thermometer in the screen rose to 73·8°—wind, S.W.; on the 4th the temperature fell to 48·1°—wind, N.W. The minimum on the grass was 44·8°, also on the 4th.

The rainfall was 4·503 inches, distributed over 16 days. The average rainfall for July in the twenty-five years, 1865-89, inclusive, was 2·420 inches, and the average number of rainy days was 17·2. The rainfall, therefore, was considerably above—in fact, nearly twice—the average, while the rainy days were somewhat below it. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1871, also, 4·391 inches fell on 28 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868 only ·741 inch fell on but 5 days. In 1892, 1·952 inches fell on 12 days; in 1893, 2·042 inches on 14 days; and in 1894, 3·772 inches on 21 days.

High winds were noted on as many as 13 days, but attained the force of a gale on only two occasions—the 12th and 14th. Temperature reached or exceeded 70° in the screen on only 2 days—the 6th and 7th. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888, the maximum for July was only 68·7°. In 1891 and 1894, maxima of 70° were reached on only 3 days, and in 1892, on only 2 days; but in 1893, 70° was reached on 8 days in this month. Electrical disturbances were frequent on the 19th and 21st. Hail fell on the 19th.

The weather of the period ended Saturday, the 6th, proved the converse of that of the previous week, being at first broken, with thunderstorms and heavy rains, but afterwards becoming fine, dry, and ultimately very warm. During the first three days the weather in the British Isles was controlled by a cyclonic system which travelled slowly along the S. course of Ireland, to North Wales, thence across the N. of England and the North Sea to the South of Sweden, where it was found on Thursday morning. Its passage was attended by clouded skies, heavy rains, and in many places thunder and lightning, as well as by low temperature for the season. On Thursday an anticyclone spread in over Ireland and England from the westward, causing a return of fine, dry weather, which culminated in great warmth on Saturday. On this day the high pressure system "backed" towards S.E., causing a warm S.W. wind to blow over Ireland. In Dublin pressure increased from a minimum of 29·401 inches at 1 30 p.m. of Monday (wind, E.) to a maximum of 30·281 inches at 9 a.m. of Thursday (wind, N.W.). On Thursday the minimum in the screen was 48·1°; on Saturday the maximum was 73·8°. Rain fell on the first two days to the amount of ·757 inch, ·566 inch being measured on Monday. The prevalent wind was north-westerly.

Changeable, but not unfavourable, weather held throughout the week ended Saturday, the 13th. The distribution of atmospheric pressure was cyclonic in the British Islands and Scandinavia, anticyclonic for the most part over France and Germany, as well as in the South of England up to Tuesday. Gradients for south-westerly winds were steep over Ireland until Wednesday morning, when a depression of some depth and intensity was found with its centre between the Shetlands and

...Mar...

the S...V... ...his disturbance caused strong winds—and gales at exposed stations—from W... coast of Norway. Ten with it rain fell heavily in the N.W. of Ireland, the Hebrides and Shetland... and N.W., in connection ...stem passed away when another and more serious depression approached Ireland from the Atlantic, producing copious rains in places and squally S.W., veering to N.W. winds. On Thursday night it blew a moderate gale in both Dublin and Liverpool. Friday proved fair and bright in the rear of the depression, the centre of which lay over Denmark at 8 a.m. On Saturday the barometer fell again, and the wind freshened from W. with a quickly rising temperature. Very warm, even hot, weather was experienced in England up to Friday—the maxima in London were 80°, 82°, 79°, 77°, and 76° respectively. In Dublin the mean height of the barometer was 29·913 inches, pressure ranging from 30·114 inches at 9 a.m. of Sunday (wind, S.S.W.) to 29·641 inches at 9 p.m. of Thursday (wind, N.W.). The corrected mean temperature was 60·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·7°. On Sunday the thermometer rose to 71·8° in the screen, on Friday it fell to 49·0°. The rainfall amounted to ·243 inch, on two days, ·223 inch being measured on Thursday. The prevailing winds were at first S.W., afterwards N.W., blowing from both quarters with considerable force.

As the week ended Saturday, the 20th, advanced, the weather fell into a very changeable, showery condition, and the strong winds of the previous week gave place to variable breezes from southerly quarters. Thunder-showers occurred on Friday and Saturday. At the beginning of the period a deep trough of low atmospheric pressure stretched from W. to E. across the southern part of Scandinavia and the Baltic Sea. Baric gradients for N.W. winds were steep over the British Isles, and moderate gales from the quarter named blew at many stations on Sunday and Monday, which were otherwise fine and dry days in most places. On Monday night a new disturbance advanced to the N.W. of Ireland from the Atlantic. It caused heavy rain in Munster and a temporary rise of temperature. During the remainder of the week the barometer fell intermittently as area after area of low pressure developed or arrived over the British Isles and their neighbourhood. On Friday and Saturday torrential showers of rain and hail, accompanied in some instances by thunder and lightning, occurred in many places, and the week closed with a generally unsettled appearance. In Dublin the mean height of the barometer was 29·705 inches, pressure ranging from 30·017 inches at 9 a.m. of Monday (wind, W.N.W.) to 29·411 inches at 9 a.m. of Saturday (wind, S.E.). The corrected mean temperature was 59·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·7°. On Sunday the sheltered thermometers fell to 51·7°; on Tuesday they rose to 69·1°. Rain fell on six days to the amount of ·748 inch, ·238 inch being measured on Thursday and ·202 inch on Friday. Thunder and hail occurred on Friday. The prevalent winds were N.W. and S.W.

A torrential rainfall in many parts of Ireland and England was the leading feature in the weather of the week ended Saturday, the 27th. Atmospheric pressure ruled low throughout, and it frequently happened that several minima developed within a wide-spreading barometric depression. The result was the commingling of opposing warm and cold-air currents, light variable winds, and an abundant precipitation. In the 24 hours ending 8 a.m. of Monday 1·23 inches of rain fell at Brixton in the south of London. In Dublin, the measurement at 9 a.m. of Wednesday was 1·014 inches, while that of the succeeding 24 hours was 1·256 inches—2·270 inches in two days. At Killiney, Greystones, and Fassaroe (Co. Wicklow) the downpour was not so heavy—1½ inches being registered. Friday and Saturday were fine days in and near Dublin, but thunderstorms and very heavy rains continued to prevail in many parts of Great Britain. On Sunday much thunder and lightning occurred in Ireland and Wales—a life was lost by lightning in the Co. Carlow and another in Brecknockshire. In Dublin the mean height of the barometer was 29·664 inches, pressure ranging between 29·341 inches at 9 a.m. of Sunday (wind, S.S.W.) and 29·907 inches at 9 a.m. of Tuesday (wind, W.N.W.). The corrected mean temperature was 57·7°. The mean dry bulb temperature was 57·1°. On Friday the screened thermometers rose to 68·7°, whereas on Wednesday they fell to 50·3°. The rainfall was 2·753 inches on six days, 1·256 inches being measured on Thursday and 1·014 inches on Wednesday The prevalent winds were W.N.W. and E.N.E.

During the period from Sunday the 28th, to Wednesday the 31st, inclusive, no rain fell in Dublin. The weather was cloudy and cool, but otherwise favourable, with moderate N.W. winds. In London Sunday was gloomy and very wet, owing to the passage across the S.E. of England of a small depression embraced within the limits of a large area of low atmospheric pressure over Great Britain and the North Sea. As this disturbance passed away the barometer rose slowly in most districts and the weather became fine and dry, although the sky remained cloudy and the air was cool. On Tuesday and Wednesday a shallow area of low pressure moved eastwards across France. This system caused N.E. winds, and bright, cool weather in England. In Ireland the sky remained cloudy. In Dublin the barometer rose from 29·735 inches at 9 a.m. of Sunday (wind, W.N.W.) to 30·117 inches at 9 a.m. of Wednesday (wind, N.). On Monday the screened thermometer fell to 51·0°, on Wednesday it rose to 63·8°.

The rainfall in Dublin during the seven months ending July 31st amounted to 16·785 inches on 96 days, compared with 18·133 inches on 130 days in the corresponding period in 1894, 11·666 inches on 92 days in 1893, 13·722 inches on 109 days in 1892, 10·935 inches on 92 days in 1891, 15·587 inches on 118 days in 1890, 13·146 inches on 112 days in 1889, 15·994 inches on 109 days in 1888, 7·935 inches on 80 days in 1887, and a twenty-five years' average of 14·733 inches on 112·6 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 3·680 inches on 16 days, compared with 3·805 inches on 19 days in 1894, 1·290 inches on 15 days in 1893, 2·925 inches on only 10 days in 1892, 1·325 inches on 18 days in 1891, and 1·489 inches, distributed over 18 days, in 1890. Of the total rainfall 1·040 inches fell on the 24th and ·600 inch on the 25th. The total fall since January 1 has been 17·950 inches on 83 days, compared with 21·186 inches on 115 days in 1894, 13·066 inches on 90 days in 1893, and 16·708 inches on 90 days in 1892.

Printed image digitised by the University of Southampton Library Digitisation Unit

At Cloneevin, Killiney, Co. Dublin, the rainfall in July was 3·58 inches on 17 days, compared with a ten years' average of 2·035 inches on 13·9 days. On the 24th inches fell on 1·7 days 1·05 inches. In July, 1894, 4·08 inches fell on 23 days, the maximum being 1·17 inches on the 24th, as in the present year. On the day named 1·100 inches fell at Fassaroe, Co. Wicklow. From the 2nd January 1, 1895, 16·92 inches of rain have fallen on 98 days at this station (Cloneevin).

AUGUST.—Like August, 1894, this month was very rainy. In Dublin rain was measured on as many as 27 days, and the total fall was nearly three-quarters of an inch in excess of the average. Unlike August, 1894 however, the month was fairly warm—the mean temperature being slightly above the average. This was due to comparative warmth by night—the mean minimum temperature being 54·2° compared with the average 53·6°, while the mean maximum was exactly the average—namely, 65·8°. There was an overwhelming prevalence of S.W. and W. winds, S. and N.W. being the next most frequent quarters from which the wind blew. Two-thirds of the sky was clouded throughout the month, compared with three-fourths in August, 1894.

In Dublin the arithmetical mean temperature (60·0°) was slightly above the average (59·7°); the mean dry bulb readings at 9 a.m and 9 p.m. were 58·8°. In the thirty years ending with 1894, August was coldest in 1881 (M. T.=57·0°), and warmest in 1893 (M. T.=63·0°). In 1885, the M. T. was only 57·1°; in 1879 (the "cold year"), it was 57·7°; in 1887, 60·3°; in 1888, 58·2°; in 1889, 58·6°; in 1890, only 57·2°; in 1891, 58·1°; in 1892, 60·0°; in 1893, 63·0°; and in 1894, 57·9°.

The mean height of the barometer was 29·818 inches, or 0·079 inch below the corrected average value for August—namely, 29·897 inches. The mercury marked 30·216 inches at 9 a.m. of the 25th and fell to 29·247 inches at 9 a.m. of the 11th. The observed range of atmospheric pressure was, therefore ·969 inch—that is, a little less than an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 58·8°, or 1·9° above the value in August, 1894. It was also 0·8° above the value for July, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·47), the mean temperature was 59·7°, or 0·4° above the average mean temperature for August, calculated in the same way, in the twenty-five years, 1865–89, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 60·0°, compared with a twenty-five years' average of 59·7°. On the 28th the thermometer in the screen rose to 71·7°—wind, W.S.W.; on the 25th the temperature fell to 46·3°—wind, N.W. to W.S.W. The minimum on the grass was 41·6°, also on the 25th.

The rainfall was 3·548 inches, distributed over 27 days. The average rainfall for August in the twenty-five years, 1865–89, inclusive, was 2·825 inches, and the average number of rainy days was 15·5. The rainfall, therefore, and also the rainy days were considerably in excess of the average. In 1874, the rainfall in August was very large—4·946 inches on 18 days; and in 1868 also 4·745 inches fell on, however, only 13 days; but the heaviest downpour in August occurred in 1889, when 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. In 1887, 1·520 inches of rain fell on 16 days; in 1888, 1·270 inches on 12 days; in 1890, 2·799 inches on 19 days; in 1891, 4·953 inches on 25 days; in 1892, 3·557 inches on 22 days, in 1893, 2·713 inches on 16 days; and in 1894, 3·726 inches on 18 days.

High winds were noted on as many as 8 days, but did not attain the force of a gale on any occasion in Dublin. A thunderstorm occurred on the 11th, and lightning was seen on the 10th. Temperature reached 70° in the screen on 4 days. The atmosphere was foggy on the 15th.

The weather was broken during the first three days. On Thursday, the 1st, a considerable and tolerably brisk fall of the barometer set in, as a new series of low pressure systems approached the British Islands from the Atlantic. At 7 45 p.m. heavy rain fell in Dublin, and the wind freshened from the southward. Next day (Friday) thundershowers occurred in many districts, and hail was reported from Cambridge. Saturday was dull and chiefly wet in England. In the evening and at night rain fell in torrents in many places. The barometer fell to 29·22 inches at 8 a.m. at Stornaway. In Dublin it fell to 29·291 inches at 9 p.m. of Saturday (wind, W.). On Friday the screened thermometer rose to 65·8. Rain was measured on all three days to the amount of ·667 inch, ·460 inch falling on Saturday. The prevailing wind was S.W.

The record for the week ended Saturday, the 10th, is again one of unsettled, showery weather. The type of distribution of atmospheric pressure was throughout cyclonic. On Sunday a large area of low barometer covered the British Isles, the absolute minimum (29·24 inches) being found at 8 a.m. at Spurn Head in Yorkshire. During the day heavy thunder showers occurred in the S.E. of England and also in the Co. Wicklow. At Greystones the fall of rain and hail amounted almost to an inch and the thunder and lightning were exceptionally violent. On Monday another depression advanced across Ireland from W.S.W., causing a renewed rainfall, particularly over the southern half of this country as well as in Wales and the S. and E. of England. During the next two days heavy showers fell at intervals, being accompanied by thunder in the Thames valley and along the E. coast of England. At 8 a.m. of Thursday another depression had arrived off the S.W. of Ireland, whence it travelled towards N.N.E., accompanied by renewed rain or passing showers. On Saturday again a depression passed across Ireland, so that the weather was kept in a changeable state to the very close of the week. In Dublin the mean height of the barometer was 29·580 inches, pressure varying between 29·316 inches at 9 a.m. of Sunday (wind, W.N.W.) and 29·824 inches at 9 p.m. of Wednesday (wind also W.N.W.). The corrected mean temperature was 57·6°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 57·1°. On Thursday the thermometer in the screen fell to 48·0°, on Friday it rose to 68·6°. Rain fell daily to the amount of 1·116 inches, ·145 inch being measured on Sunday and ·700 inch on Saturday. The prevalent winds were once more N.W. and S.W. Sheet lightning was seen on Saturday evening.

Printed image digitised by the University of Southampton Library Digitisation Unit

The ... unsettled ... changeable, ... 17th. After Monday, however, the rains were not so heavy—at least ... week ended Saturday, the ... was a decided advance in temperature. The week opened with a well-... near Dublin—and there ... over Ireland and travelling northwards. At midnight of the 10–11th ... marked cyclonic system lying ... blin from the southward, accompanied hy vivid lightning and distant thunder. At Holyhead no less than 2·68 inches of rain fell in this storm. On Sunday, Monday, and Tuesday heavy showers fell at intervals in connection with the same disturbance, the centre of which passed directly over Dublin about 11 a.m. on Sunday, when the wind suddenly shifted from E.S.E. to W.N.W. At 8 a.m. of Monday the depression was central over the Hebrides and in its rear the barometer was rising generally throughout England and Ireland. During Tuesday a secondary system of low pressure passed up the English Channel, reaching the Netherlands on Wednesday morning and Eastern Prussia 24 hours later. This disturbance caused very heavy rains in the S. and E. of England, and afterwards in Germany. At 8 a.m. of Wednesday the rainfall measurements were—in London ·81 inch, at Cambridge 1·06 inches, and at Yarmouth 1·69 inches. With the passing away of this depression conditions improved, except in Scotland and the N.W. of Ireland, and on Friday morning an anticyclone lay over England, Wales, and France. On Saturday a large area of relatively low barometer was spreading eastwards across Ireland from the Atlantic, and the weather again fell into a showery condition. In Dublin the mean atmospheric pressure was 29·869 inches, the barometer ranging between 21·247 inches at 9 a.m. of Sunday (wind, E.S.E.) and 30·183 inches at 9 a.m. of Thursday (wind, S.). The corrected mean temperature was 60·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 59·6°. On Tuesday the screened thermometers sank to 51·2°; on Saturday they rose to 70·6°. The rainfall was ·585 inch on seven days, ·247 inch being recorded on Monday. The prevailing winds were W.S.W. and S.S.W. The air was foggy on Thursday evening.

During the earlier part of the week ended Saturday, the 24th, anticyclonic conditions held, the weather being warm and fine, except in the extreme West and North of our Islands, where the amount of cloud remained large and more or less rain fell daily. On Wednesday a very sudden change for the worse took place, the anticyclone retreated south-eastwards, and a shallow complex depression—with several minima—became developed over Ireland and England. As usually occurs under such circumstances, the atmosphere became close and oppressive, much sea-fog and cloud formed, and destructive thunderstorms broke out in the south of Ireland, over the greater part of England, and in Denmark. In Dublin a heavy downpour of rain occurred on Thursday, amounting to ·518 inch, but there was no thunderstorm. On Friday a V-shaped secondary depression passed eastwards to the southward of Ireland; this caused the wind to veer to N.W. or N. in this country, and the weather became at once colder, clearer, and finer. On Saturday, cumuli formed in the clear, cold atmosphere and heavy evaporation showers resulted. In London the thermometer rose to 81° in the shade on three days—Monday, Wednesday, and Thursday. In Dublin the mean height of the barometer was 29·959 inches, pressure ranging between 29·742 inches at 9 a.m. of Friday (wind, S.W.) and 30·191 inches at 9 p.m. of Saturday (wind, N.W.). The corrected mean temperature was 61·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 59·5°. On Sunday the screened thermometers rose to 70·0°; on Saturday they fell to 49·0°. Rain fell on six days to the total amount of ·737 inch, ·518 inch being measured on Thursday. The prevalent winds were S.W. and N.W.

In the week ended Saturday, the 31st, the weather improved (except in the far North and North-west) as the week advanced, and became fine, warm, and breezy, having been at first dull, rainy and damp. As in many previous weeks, the distribution of atmospheric pressure was mainly anticyclonic in Central Europe, cyclonic over the Atlantic, the northern half of the British Isles, and in Scandinavia. Hence, the weather was comparatively fine in the South, blustering and rainy in the North. At the very beginning of the period, a remarkable dip in temperature occurred—the thermometer falling early on Sunday morning to 46° in Dublin, 45° at Aberdeen, 44° in London and at Parsonstown and Oxford, 42° at Cambridge and Loughborough, and 41° at Nairn. A dull, wet day followed, but temperature rose fast with a S.W. wind. Monday was also rainy in most places, the rainfall being heavy in Ireland, Wales, and Scotland, and the North of England. A depression of great size and depth now passed northeastwards to Norway, causing S.W. gales at exposed stations, and squally S.W. to W. winds in many places. At 4.45 p.m. of Tuesday a brilliant double rainbow was seen in Dublin. The last four days of the week were warm, breezy, and changeable in Dublin; hot and fine in France and the S. of England; squally and showery or rainy in the N. of Ireland, Scotland, and Scandinavia. In Dublin the mean height of the barometer was 29·974 inches, atmospheric pressure ranging between 30·216 inches, at 9 a.m. of Sunday (wind, W.S.W.), and 29·640 inches at 9 a.m. of Tuesday (wind, W.). The corrected mean temperature was 60·4°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 59·8°. The shade thermometers rose to 71·7° on Wednesday, having fallen to 46·3° on Sunday. Rain fell on four days to the amount of ·443 inch, ·281 inch being registered on Monday. The prevalent winds were S.W. and W. At the close of the week temperature was low over Northern Europe.

The rainfall in Dublin during the eight months ending August 31st amounted to 20·333 inches on 123 days compared with 9·455 inches on 96 days during the same period in 1887, 17·264 inches on 121 days in 1888, 18·893 inches on 134 days in 1889, 18·386 inches on 137 days in 1890, 15·888 inches on 117 days in 1891, 17·279 inches on 131 days in 1892, 14·379 inches on 108 days in 1893, 21·859 inches on 148 days in 1894, and a twenty-five years' average of 17·558 inches on 128·1 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in August, 1895, was 4·735 inches distributed over 24 days. Of this quantity 1·180 inches fell on the 10th, in addition to ·945 inch on

Printed image digitised by the University of Southampton Library Digitisation Unit

the 4th. The total fall since January 1 amounts to 22·685 inches *per* of with 25·206 inches on 131 days in 1894, 16·341 inches on 106 days in 1 on 107 days, compared n 108 days in 1892. and 21·29 inches o

SEPTEMBER.—As in both 1893, and in 1894, September pr ved a favourab month thro ral and The most remarkable feature in the month was the stabilit of an anticyclone over Cent y at the Western Europe, while cyclonic conditions held in the far N orth and North-west, especiall and at beginning. The high pressure system was accompanied clear skies, quiet weather ical heat times an extremely large diurnal range of temperature. In France and Germany tro r ranged prevailed during the greater part of the month, and in England also the thermomet London unprecedentedly high. There were eight days on which the maximum in the shade recorded i the heat reached or exceeded 80°, the highest reading of all being 86° on the 24th. In Dublin nd the was tempered by a sea breeze, but the amount of bright sunshine was above the average, s and mean amount of cloud was only 42·2 per cent. Towards the close of the month heavy dew dense night fogs became very prevalent.

The three warmest Septembers experienced in Dublin of late years have been—1865 (M.T.= 61·4°), 1890 (M. T.= 59 6°), and 1895 (M. T.= 59·1°).

In Dublin the arithmetical mean temperature (59·1°) was as much as 3·3° above the average (55·8°); the mean dry bulb readings at 9 a m. and 9 p.m. were 57·5°. In the thirty years ending with 1894, September was coldest in 1886 and in 1882 (M. T.=53·0°), and warmest in 1865 (M. T.=61·4°). In 1880, the M. T. was as high as 58·6°; in 1879 (the "cold year"), it was 54·3°; in 1887, 54·0°; in 1888, 54·4°; in 1889, 55·8°, or exactly the average; in 1890, it was as high as 59·6°; in 1891, it was 57·6°; in 1892, 54·5°, in 1893, 55 9°; and in 1894, 53·8°. So warm a September as that of 1890 had not occurred for a quarter of a century, and this month was only half a degree (0·5°) cooler.

The mean height of the barometer was 30·102 inches, or 0·192 inch above the corrected average value for September—namely, 29 910 inches. The mercury rose to 30·420 inches at 9 a.m. of the 20th, and fell to 29·494 inches at 9 p m. of the 10th. The observed range of atmospheric pressure was, therefore, ·926 inch—that is, a little more than nine-tenths of an inch.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a m. and 9 p m was 57·5°, or only 1·3° below the value for August, 1895. Using the formula, *Mean Temp.* $= Min. + (max - min. \times \cdot 476)$, the mean temperature was 58 7°, or 3 2° above the average mean temperature for September, calculated in the same way, in the twenty-five years, 1865–89 inclusive (55·5°). The arithmetical mean of the maximal and minimal readings was 59 1°, compared with a twenty-five years' average of 55·8°. On the 2nd, the thermometer in the screen rose to 72·0°—wind, S.W.; on the 22nd the temperature fell to 43 0°—wind, calm. The minimum on the grass was 37·0°, also on the 22nd.

The rainfall was only ·543 inch, distributed over 7 days—the rainfall and rainy days were thus considerably below the average. The average rainfall for September in the twenty-five years, 1865–89, inclusive, was 2·176 inches, and the average number of rainy days was 14·7. In 1871, the rainfall was very large—4·048 inches on, however, only 13 days. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1888, the rainfall was only ·728 inch on 10 days; in 1889, 1·043 inches fell on 13 days; in 1890, 2·469 inches on 14 days; in 1891, 2·132 inches on 18 days; in 1892, 2 631 inches on 19 days; in 1893, ·729 inch on 14 days; and in 1894, only ·442 inch on 8 days.

High winds were noted on seven days, and attained the force of a gale on two occasions in Dublin—the 10th and 11th. Lightning was seen on the 23rd. The atmosphere was foggy on the 2nd, 15th, 19th, 22nd, 23rd, 24th, 27th, 28th, and 29th.

During the week ended Saturday, the 7th, the weather was fine and hot on the Continent and in the South and East of England until Friday night, changeable in Ireland, Scotland, and the North of Europe generally. The heat became intense in France and Germany in the middle of the week—the thermometer rising in the shade to 94° in Paris on Tuesday, and to 91° in Berlin on Wednesday. On the night of this day a destructive thunderstorm accompanied with torrents of rain and hail (1·18 inches) passed over Lisbon (Portugal). A similar storm occurred on Friday, the rainfall being 1·58 inches. In London the daily maxima were 76°, 80°, 80°, 75°, 74°, and 75°— up to Friday inclusive. In Dublin Sunday and Monday were very fine days—the thermometer rose to 72°on Monday. Then followed a period of changeable, cloudy, and at times rainy weather lasting until Friday. Saturday proved beautifully fine—bright and warm. In the evening a lunar halo was visible. The distribution of atmospheric pressure which determined the weather just described was mainly anticyclonic over France, Germany, and the southern half of England, cyclonic to the northwestward of Ireland, in Scotland, and over Scandinavia. On Tuesday, however, a shallow thunderstorm depression passed northeastwards from the Bay of Biscay across Southern England to Denmark. In caused severe thunderstorms in England, but very little rain fell. On Friday night and Saturday morning violent thunderstorms and heavy rain prevailed over the S. and E. of England. In Dublin the mean height of the barometer was 29 973 inches, pressure decreasing to 29·819 inches at 9 a.m. of Monday (wind, S W.), and increasing to 30·133 inches at 9 p.m. of Saturday (wind, W.). The corrected mean temperature was 59·2°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 57·5°. On Monday the screened thermometers rose to 72·0°; on Friday they sank to 50·9°. The rainfall was ·476 inch on five days, ·184 inch being measured on Wednesday and ·180 inch on Monday. The prevalent winds were S W. and W.

Taken as a whole, the weather of the week ended Saturday, the 14th, was favourable. Until Monday evening an anticyclone stretched from Central Europe across England to the east of Ireland.

The thermometer rose to 76° in the sha... *In Ireland the wind was m...* ough, to 70° at Parsonstown, and to 69° in Dublin. Monday was stil... warmer—*the maxima being* 83° in London, 82° at Loughborough, 80° at Oxford, 79° at Liverpo... and Cambridge—in Dublin, 72°, the air being close and oppressive in the afternoon. Through...out Tuesday, the barometer fell fast in Ireland and Scotland as a deep depression approached the latter country from W.S.W. The centre of this system passed across the North of Scotland on Wednesday morning, the barometer falling to 28·99 inches at Nairn at 8 a.m. Fresh S.W. to N.W. gales set in on the Irish and British coasts and temperature gave way, with falls of rain or passing showers. By Friday the barometer had entirely recovered from its depression, and another anticyclone was passing eastward over the southern half of the British Islands. At 8 a.m. its centre lay over the extreme S.E. of Ireland, the barometer reading 30·31 inches at Roche's Point, Cork Harbour. Fine, quiet, but at times cloudy weather held to the end of the week. In Dublin the mean height of the barometer was 30·010 inches, pressure ranging from 29·494 inches at 9 p.m. of Tuesday (wind, W.S.W.) to 30·305 inches at 9 p.m of Saturday (wind, E.). The corrected mean temperature was 58·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 57·7°. On Sunday the screened thermometers fell to 48·2°; on Monday they rose to 71·8°. The prevailing winds were at first S., afterwards W.N.W. Rain fell on two days to the amount of ·063 inch, ·039 inch being measured on Tuesday. Temperature was very low over Central England on Saturday morning—41° at Loughborough at 8 a.m.

During the week ended Saturday, the 21st, very fine weather prevailed for the most part in Ireland, England, and on the Continent. In Scotland and Scandinavia conditions were unsettled and a good deal of rain fell. At both the beginning and the close of the period an anticyclone of considerable intensity lay over England, Ireland, and France. These high-pressure systems were accompanied by fine, quiet, weather—temperature alone being unstable, rising very high by day and falling very low at night. In Paris on Thursday the minimum was 45°, the maximum 83°—range 38°. Heavy dews fell by night, and at times a good deal of fog hung about the coasts. On Tuesday a low pressure area skirted the N.W of Ireland, passing northeastwards to Scotland and thence travelling eastward to the south of Sweden. This disturbance caused strong and squally S.W. winds as it approached, but in its rear the wind veered to N. and fell light, with a clearing sky. On Thursday much cloud covered England and drizzling rain fell tolerably widely over that country. In Ireland, however, the weather was fair and bright. Friday was brilliantly fine: on the morning of this day the isobar of 30·40 inches embraced the east of Ireland, the Irish Sea, and the central and eastern parts of England. The first frost of the season was reported from Sweden at this time, the thermometer falling to 30° in the screen at Haparanda. At Oxford the thermometer fell to 38° in the screen and to 31° on the grass. Saturday was fine, but cloud increased in Ireland, where the barometer was lower than on Friday. In Dublin the mean atmospheric pressure was 30·236 inches, the extremes being highest, 30·420 inches at 9 a.m. on Friday (wind, E.N.E); lowest, 29·959 inches at 9 a.m. of Wednesday (wind, W. by S.). The corrected mean temperature was 57·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 56·2°. On Tuesday the thermometer rose to 67·8° in the shade, on Saturday it fell to 46·7°. A slight shower fell on Wednesday afternoon, but it yielded no measurable rainfall. The prevailing wind was westerly.

Splendid weather—dry, bright, and unusually warm—held throughout the week ended Saturday, the 28th. On Monday night, indeed, a severe thunderstorm passed northwards across the centre and west of Ireland from Roche's Point to Malin Head, but this electric disturbance caused no lasting break in the weather. A large anticyclone hung over Central Europe all through the period, and, as it were, a wave of high pressure swayed westwards across the British Isles and France from time to time. At the beginning of the week the air was calm and the sky was clear. Hence the diurnal range of temperature was extremely large—even in Dublin on Sunday the thermometer in the screen ranged from 43° to 64° and on Monday from 44° to 67°. But these variations fade into insignificance when compared with those recorded at Loughborough (Leicestershire). At that inland station the diurnal range was on Sunday from 33° to 74° and on Monday from 39° to 81°. On Tuesday the heat in England became intense, the thermometer rising to 86° in London and at Loughborough, and to 84° at Cambridge. Over England, as a whole, the maximum temperature of Monday was from 19° to 13° above the average for September and even this excess was outdone on Tuesday. A light southerly air-current was the bearer of this great heat, which had first shown itself in France. The nights were warm after Monday. A good deal of haze and fog hung about towards the close of the week, especially at the coast stations and over the sea-channels. The highest Irish temperatures recorded were 76° at Parsonstown on Thursday and 77° on Friday. In Dublin the mean height of the barometer was 30·195 inches, pressure falling from 30·305 inches at 9 a.m. of Sunday (wind, S.S.E), to 30·104 inches at 9 p.m. of Tuesday (wind, S.S.W.), and rising again intermittently to 30·266 inches at 9 a.m. of Saturday (wind, N.). The corrected mean temperature was 60·2°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 58·6°. On Sunday the screened thermometers fell to 43·0°; on Thursday they rose to 70·8°. The prevalent wind was southerly. No rain fell in Dublin.

Sunday, the 29th, was at first calm, with heavy dew and a dense fog in Dublin. The weather afterwards became brilliant. Monday, the 30th, was also summerlike.

The rainfall in Dublin during the nine months ending September 30th amounted to 20·876 inches on 130 days, compared with 10·968 inches on 112 days during the same period in 1887, 17·992 inches on 131 days in 1888, 19·936 inches on 147 days in 1889, 20·855 inches on 151 days in 1890, 18·020 inches on 135 days in 1891, 19·910 inches on 150 days in 1892, 15·108 inches on

Printed image digitised by the University of Southampton Library Digitisation Unit

122 days in 1893, 22·301 inches on 156 days in 1894, and a twe[illegible]verage of [illegible]19·734 inches on 142·8 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in September, 1895, was ·98[illegible] inch, distributed over 10 days. Of this quantity ·375 inch fell on the 4th, and ·370 inch on the 2nd. At that station the rainfall since January 1, 1895, has been 23·665 inches on 117 days, compared with 23·883 inches on 125 days in the same nine months of 1892, 17·091 inches on [illegible]18 days in 1893, and 25·896 inches on 137 days in 1894.

At Cloneevin, Killiney, Co. Dublin, the rainfall in August was 3·85 inches on 24 days (the maximal fall in 24 hours being 1·05 inches on the 10th), compared with a ten years' average of 2·917 inches on 159 days. In September only ·81 inch fell at Cloneevin on 7 days. The maximal fall in 24 hours was ·34 inch on the 2nd. On an average of ten years the September rainfall at this station has been 1·530 inches on 11·6 days. Since January 1, 1895, 21·58 inches of rain have fallen at Cloneevin on 129 days. The rainfall in the first nine months of 1894 at Cloneevin was 22·92 inches on 150 days.

At Claremont, Carrickmines, Co. Dublin, the rainfall in September was ·69 inch on 4 days. At this station 20·86 inches of rain have fallen since January 1.

October.—A very cold October, with a great preponderance of north-westerly winds—both cyclonic and anti-cyclonic systems advancing generally from N.W., and crossing the British Islands towards S.E. The mean temperature was nearly 13° below that of September—the change from the unusual warmth of the end of that month being singularly abrupt and occurring as early as the morning of the 2nd. During the very cold period from the 21st to the 30th inclusive, thunder and lightning, and hail and sleet showers prevailed day after day over the Irish Sea, St George's Channel, and the western half of the English Channel. The inland frosts of this cold spell were unusually severe both in Great Britain and in Ireland. Snow lay on the Dublin Mountains on the 2nd, and also from the 22nd to the end of the month.

In Dublin the arithmetical mean temperature (46·2°) was much below the average (49·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 44·7°. In the thirty years ending with 1894, October was coldest in 1892 (M. T. = 44·8°), in 1880 (M. T. = 45·4°), and in 1885 (M. T. = 45·5°). It was warmest in 1876 (M. T. = 53·1°). In 1886, the M. T. was as high as 52·0°; in 1879 (the "cold year") it was 49·7°; in 1887 it was as low as 47·3°; in 1888, it was 49·1°; in 1889, 48·1°; in 1890, 51·7°; in 1891, 49·5°; and in 1893, 50·0°. October, 1892, beat the record for coldness.

The mean height of the barometer was 29·865 inches, or 0·025 inch above the corrected average value for October, namely, 29·840 inches. The mercury rose to 30·518 inches at 9 a.m. of the 17th, and fell to 29·077 inches at 9 a.m. of the 3rd. The observed range of atmospheric pressure was, therefore, as much as 1·441 inch—that is, a little less than an inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 44·7°, or 12·8° below the value for September. The arithmetical mean of the maximal and minimal readings was 46·2°, compared with a twenty-five years' average of 49·7°. Using the formula, *Mean Temp.* = *Min.* + (*max.* − *min.* × ·485), the value was 46·0°, or 3·5° below the average mean temperature for October, calculated in the same way, in the twenty-five years, 1865–89, inclusive (49·5°). On the 1st the thermometer in the screen rose to 65·8°—wind, S.; on the 29th the temperature fell to 29·6°—wind, N.W. The minimum on the grass was 24·0, also on the 29th. On five nights, the thermometer sunk to or below 32° in the screen, and on twelve nights frost occurred on the grass.

The rainfall was 2·840 inches, distributed over 16 days—the rainfall and the rainy days were below the average. The average rainfall for October in the twenty-five years, 1865–89 inclusive, was 3·106 inches, and the average number of rainy days was 17·6. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1890 only ·639 inch fell on but 11 days, in 1884 only ·334 inch on but 14 days, and in 1868 only ·856 inch on 15 days. In 1888, the rainfall was 1·227 inches on 16 days; in 1889, 4·853 inches fell on 22 days. In 1891, 3·590 inches fell on 13 days; in 1892, 2·535 inches on 17 days; in 1893, 1·033 inches on 16 days; and in 1894, 3·967 inches on 20 days. From these figures it will be seen that October, 1890, proved the driest October on record for more than a quarter of a century at least.

There was a thunderstorm on the morning of the 26th, and lightning was seen on the nights of the 25th, 27th and 28th. High winds were noted on 9 days, but attained the force of a gale on only two occasions—the 2nd and 3rd. The atmosphere was more or less foggy in Dublin on the 1st, 14th, 15th, 17th, 19th, 20th, and 21st. Hail fell on the 2nd, 4th, 21st, 22nd, 24th, 25th, 26th, and 31st; sleet on the 2nd, 22nd and 24th. A solar halo appeared on the 30th.

The period ended Saturday the 5th, witnessed the complete and final break-up of the warm, summer-like weather which had prevailed during the greater part of September. On Monday, September 30th, the barometer began to fall quickly all over Western Europe, and on Tuesday, the 1st, storm, rain, thunder and lightning, and a remarkable fall of temperature spread eastward across Ireland as a large and complex depression advanced from the Atlantic, its centre being off the east coast of Scotland at 8 a.m. of Wednesday. This disturbance caused a complete break-up of the fine, warm weather, so that with the passing of September came a sharp plunge from summer into winter. Nearly six-tenths of an inch of rain fell in Dublin during the night of the 1st. Mount Leinster was snow-capped on the morning of the 2nd, which proved very inclement with heavy showers of sleety rain and hail, the thermometer in Dublin not rising above 49·7° in the screen and falling to 31·9° on the grass in the evening. A strong, tempestuous gale blew in the S.W. of England and on the Lancashire coasts, and this was renewed on Thursday. Dull, rainy weather brought the

During the week *ended* Saturday, the 12th, except on Tuesday, which was a dull, rainy, cold day, favourable *weather* prevailed in Dublin, and indeed throughout the greater part of Ireland. In England and France conditions were unsettled and rain fell in large quantities. On Sunday a second atmospheric depression passed across the S. of England towards E.N.E, causing copious rain there and throughout the northern half of France, Belgium, and North Germany. Heavy showers fell on this day in the North of Ireland also. On Monday evening a new depression approached the Land's End from S.W This system developed considerable intensity as it advanced across England, and its centre lay over the E. and S.E of that country at 8 a.m. of Wednesday. At the hour named strong S.winds were blowing at Dungeness, the North Foreland, and Yarmouth, equally strong N. winds at stations in the meridian of Greenwich and to the westward of it. Very heavy rains accompanied the disturbance, the largest measurement of all being 4·41 inches at Nice. Squally N.W. winds held until the end of the week in the rear of this depression, the centre of which lay over the Christiania Fjord on Friday morning. At this time gradients were made steep by the advance of an anticyclone over Ireland from the Atlantic. In consequence the wind rose to a moderate gale on Friday night. Cloudy, breezy, mild weather brought the period to a close. In Dublin the mean height of the barometer was 29·759 inches, pressure falling to 29·369 inches at 9 a.m. of Tuesday (wind, N.E.) and rising to 30·186 inches at 9 p.m. of Saturday (wind, W.). The corrected mean temperature was 49·3°. The mean dry bulb temperature at 9 a.m. and 9 p.m. was 48·2°. On Saturday the screened thermometers rose to 57·8°; on Thursday they fell to 39·1°. The prevailing wind was N.W. Rain fell on two days to the amount of ·241 inch, ·170 inch being registered on Tuesday.

During the week ended Saturday, the 19th, fine autumnal weather ruled, except on Monday and Tuesday, when the British Isles were under the influence of shallow and irregular atmospheric depressions. These finally passed away or dispersed as a large anticyclone advanced from the north-westward on Tuesday and Wednesday. This fair-weather system governed the weather over Western Europe to the close of the week—fine days being succeeded by quiet, clear, cold nights, with sharp frosts inland. Sunday was a dull, but fine, mild day. Heavy rains fell on Monday and Tuesday—the precipitation being especially large in parts of Ireland and the North of England—1·88 inches at Belmullet, 1·57 inches at Donaghadee, and 2·17 inches at Shields. As usually happens, slight but irregular barometric gradients and light variable winds, with unsteady temperature, led to these heavy rains. The principal downpour coincided with a rapid rise of the barometer, a setting in of N.E. and N. winds, and a brisk fall of temperature. On Thursday morning the isobar of 30·50 inches embraced the greater part of Great Britain and the N.E. and E. of Ireland. As the system of high pressure moved south-eastwards, southerly winds set in over Ireland, temperature rose and the amount of cloud increased. Early on Friday morning sharp frost prevailed at the inland English stations, the minima in the screen being 27° at Cambridge, 29° at Leith, York and Oxford, 30° at Loughborough, and 34° in the Southern London district. At the coast stations temperature was much higher—thus, at 8 a.m. of Friday the thermometer read 51° at Yarmouth, but only 29° at Cambridge. In Dublin the mean beight of the barometer was 30·223 inches, pressure receding to 29·87° inches at 9 a.m. of Tuesday (wind, S.E) and rising to 30·518 inches at 9 a.m. of Thursday (wind, E.). The corrected mean temperature was 50·3°. The mean dry bulb reading at 9 a.m and 9 p.m. was 49·3°. On Monday the screened thermometers rose to 61·8°, on Thursday they sank to 37·0°. The prevailing winds were E.N.E. and S.E. Rain fell on three days to the amount of ·806 inch, ·452 inch being measured on Monday.

A plunge into midwinter was the main feature of the week ended Saturday, tho 26th. On Sunday, the anticyclone, which had prevailed for several days, was fast breaking up, but the weather remained fine and the sbade temperature in Dublin reached 54·8°. Monday broke dull and chilly, and a cold rain fell throughout the afternoon, followed by bailshowers in the evening. After midnight, a squally N.E. wind prevailed, with driving showers of cold rain, sleet, and hail. At dawn the Dublin and Wicklow mountains were snowcapped, and so they remained to the end of the week. Between Tuesday and Thursday a long trough of low atmospberic pressure stretched across the Peninsula and France to the south of Scandinavia. Polar winds consequently prevailed in the British Islands, wbere the weather became exceedingly cold for the time of year. On Wednesday the thermometer fell to 23° in the shade at Parsonstown; on Thursday the same low value was reached at Loughborough, the minimum on the grass being 16°. In Dublin heavy hail showers fell about 2 p.m. on both Thursday and Friday, and lightning was seen on the latter day both before dawn and after dark. About 9 a.m. of Saturday a storm of thunder, lightning and hail passed over the south-eastern coast of Dublin Bay, and this was soon followed by a fall of hail in the city itself. At Loughborough the minimum thermometer registered only 22° on Saturday morning. The mean height of the barometer in Dublin was 29·834 inches, pressure ranging between 30·249 inches at 9 a.m. of Sunday (wind, calm) and 29·521 inches at 9 a.m. of Thursday (wind, W.N.W.). The corrected mean temperature was 40·6°, the mean dry bulb reading at 9 a.m. and 9 p.m. being more than 2° lower—viz., 38·3°. On Sunday tbe shade maximum was as high as 54·8°, on Saturday the shade minimum was as low as 30·7°, the grass minimum being only 25·9°. The rainfall was ·421 inch, distributed over four days, ·338 inch being measured on Monday. The precipitation was chiefly in tbe form of hail and sleet. The prevalent wind was N.N.W.

During the earlier portion of the closing period—the 27th to the 31st inclusive—the weather was fair and cold on shore, hut hail showers passed daily down the Irish Sea, St. George's Channel and across the moutb of the Englisb Cbannel to the Channel Islands. These showers fell from

Printed image digitised by the University of Southampton Library Digitisation Unit

massive cumuli and were accompanied hy much thunder and lightning. On Wednesday the 30th, a depression advanced from N.W. across the British Isles, causing a rapid rise of temperature, much cloud and a heavy rainfall in many places. A fresh easterly wind was blowing as the month drew to a close.

The rainfall in Dublin during the ten months ending October 31st amounted to 23·716 inches on 146 days, compared with 12·366 inches on 123 days during the same period in 1887, 19·219 inches on 147 days in 1888, 24·789 inches on 169 days in 1889, 21·494 inches on 162 days in 1890, 21·610 inches on 148 days in 1891, 22·445 inches on 167 days in 1892, 16·141 inches on 138 days in 1893, 26·268 inches on 176 days in 1894, and a twenty-five years' average of 22·840 inches on 160·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in October amounted to 2·605 inches on 14 days. Of this quantity ·575 inch fell on the 1st. The rainfall at Greystones in October, 1889, was no less than 6·935 inches on 22 days, or more than 11 times as great as the fall in October, 1890, when only ·600 inch fell on 13 days In 1891, 5·122 inches fell on 14 days, in 1892, 3·340 inches on 15 days, in 1893, ·710 inch on 15 days, and in 1894, 6·325 inches on 17 days. From January 1st, 1895, up to October 31st, rain fell at Knockdolian on 131 days to the total amount of 26·270 inches. In 1892, the rainfall of the corresponding ten months was 27·223 inches on 140 days; in 1893, 17·801 inches on 133 days, and in 1894, 32·221 inches on 154 days.

At Cloneevin, Killiney, Co. Dublin, the rainfall in October, was 2·650 inches on 14 days, compared with 3·040 inches on 17 days in 1892, ·710 inch on 14 days in 1893, 6·460 inches on 17 days in 1894, and a ten years' average of 2·737 inches on 17·6 days. On the 1st ·65 inch fell. Since January 1, 1895, 24·23 inches of rain have fallen at this station on 143 days.

NOVEMBER, 1895, proved an open, dull, squally and rainy month in the neighbourhood of Duhlin. It was perceptibly warmer than October, and no frost was recorded in the thermometer-screen in the city. On the grass the thermometer fell to or below 32° on 5 nights only, compared with 12 nights in October. The range of pressure was great—nearly 2 inches. Only twice in the last thirty years has November been milder than in the present year—in 1881, when the mean temperature was as high as 50·3°, or 5·6° above the average, and in 1894, when the mean temperature was 47·8°, or 0·8° above that of the month now under review.

In Dublin the arithmetical mean temperature (47·0°) was decidedly above the average (44·7°); the mean dry bulb readings at 9 a.m. and 9 p.m. were 46·1°. In the thirty years ending with 1894, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°), warmest in 1881 (M. T. = 50·3°). In 1886, the M. T. was as high as 46·4°, in the year 1879 (the "cold year") it was 43·9°; in 1887, it was 42·6°, in 1888, 47·5°; in 1889, 46·4°; in 1890, 45·3°; in 1891, 43·4°; in 1892, 46·9°; in 1893, 43·8°; and in 1894, 47·8°.

The mean height of the barometer was 29·776 inches, or 0·084 inch helow the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·447 inches at 9 p.m. of the 24th, having fallen to 28·490 inches at 9·30 p.m. of the 10th. The observed range of atmospheric pressure was, therefore, 1·957 inches—that is, slightly less than two inches.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 46·1°, or 1·4° ahove the value for October, but 11·4° helow that for September, 1895. The arithmetical mean of the maximal and minimal readings was 47·0°, compared with a twenty-five years' average of 44·7°. On the 15th the thermometer in the screen rose to 58·8°—wind, S.W.; on the 4th the temperature fell to 34·3°—wind, calm. The minimum on the grass was 28·8°, also on the 18th.

The rainfall was 3·582 inches, distributed over 21 days—the rainfall and the rainy days were considerably ahove the average. The average rainfall for November in the twenty-five years, 1865-89, inclusive, was 2·452 inches, and the average number of rainy days was 17·0. In 1876 the rainfall in November was large—3·614 inches on 20 days; in 1872, also, 3·414 inches fell on 24 days; in 1887, 3·012 inches fell on 18 days; in 1888, 6·549 inches fell on 26 days; in 1890, 4·212 inches fell on no less than 27 days, in 1891, 2·911 inches fell on 15 days; in 1892, 2·404 inches on 19 days. On the other hand, the rainfall in 1889 was only ·929 inch on 9 days; in 1870, only 1·218 inches on 11 days; in 1879, 1·251 inches on 10 days; in 1893, 1·870 inches on 17 days; and in 1894, 1·482 inches on 15 days.

High winds were noted on 15 days, and attained the force of a gale on seven occasions—the 5th, 6th, 10th, 11th, 15th, 16th, and 19th. The atmosphere was more or less foggy in Dublin on the 3rd, 4th, 8th, 27th, 28th, and 29th.

Lunar halos were seen on the 4th and 30th. Hail fell on the 16th.

The first two days of the month were quiet and fine, cloudy and mild, with a high harometer and moderate south-easterly winds. Much cirrus came up from S. on the afternoon of Saturday, the 2nd.

The weather was of the south-westerly and unsettled type throughout the week ended Saturday the 9th, and the distribution of atmospheric pressure was cyclonic—one depression of great intensity passing across the British Islands on Tuesday and Wednesday. At 6 p.m. of the former day the barometer was down to 28·47 inches at Belmullet, Co. Mayo, while it stood as high as 30·17 inches at Nice. This large difference of pressure was attended by fresh or strong south-westerly gales over the greater part of Western Europe, and rain fell freely in many districts. Before this disturbance arrived several shallow depressions existed, so that the weather was changeable. In Ireland, owing to slight baric gradients a good deal of fog formed and temperature became very low on Sunday night—the sheltered minima heing 34° in Duhlin and at Belmullet, 31° at Valentia Island, and 27° at Parsonstown. Temperature rose fast on Tuesday, as the deep cyclonic system

Printed image digitised by the University of Southampton Library Digitisation Unit

approach[illegible]hed, and r[illegible]ained above the average until Saturday, when a "chill" spread over Ireland from the [illegible] westward[illegible]. In South London the thermometer rose to 61° on Wednesday and 60° on Thursday [illegible]. On Friday a secondary complex depression brought heavy rains to the S. and S.E. of England, [illegible] but the weather improved in Ireland. In Dublin the mean height of the barometer was 29·617 inches, pressure ranging from 29·934 inches at 9 a.m. of Sunday (wind, S.E.) to 28·871 inches at 5 p.m. of Tuesday (wind, S.). The corrected mean temperature was 47·0°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 45·8°. On Monday the screened thermometers fell to 34·3°, on Wednesday they rose to 56·7° The prevailing wind was S.W. The rainfall measured ·974 inch on six days, ·500 inch being registered on Tuesday. On Friday the thermometer at Biarritz rose to 79° in the shade, and the temperature at that station at 8 a.m. of Saturday was 73°.

Cyclonic conditions and weather of the south-westerly type (that is, unsettled, rainy, squally, and with rapid alterations in temperature) held throughout Western and Northern Europe during the whole week ended Saturday the 16th. On Sunday a vast depression of great depth advanced rapidly towards the British Islands from S.W. Even in Dublin the barometer sank to 28·490 inches at 9·30 p.m., but much lower values were recorded in the extreme N.W. and N., and at 8 a.m. of Monday the reading of 28·23 inches was noted at Sumburgh Head in the Shetlands. The barometer had not been as low as 28·490 inches in Dublin since October 13, 1891, when it read 28·251 inches at 3·30 p.m. Severe S.W. gales resulted, and large quantities of rain fell over the whole kingdom. Monday was changeable owing to the approach of a secondary depression. At night lightning was seen in the South of Ireland, and from Prawle Point to the North Foreland in the South of England. At 9 a.m. of Tuesday the waning moon and the planet Venus were seen in bright sunshine. A beautiful conjunction of these bodies was well observed on Wednesday morning. Early on Thursday thunderstorms occurred both at Malin Head and at Roche's Point, accompanied by hail showers. On Friday a new series of deep depressions reached Ireland from the Atlantic, the barometer falling four-fifths of an inch in Dublin. Southerly gales and heavy rain occurred, while temperature rose to 58·8°. Early on Saturday morning a sudden "chill" succeeded this warmth in connection with a V-shaped secondary depression, and rain, hail and sleet fell abundantly, the Dublin and Wicklow Mountains becoming deeply covered with snow. At the same time the thermometer rose above 60° all over the South of England. In Dublin the mean height of the barometer was only 29·318 inches, pressure ranging from 28·490 inches at 9.30 p.m. of Sunday (wind, S.W.) to 29·831 inches at 9 p.m. of Thursday (wind, W.S.W.). The corrected mean temperature was 47·1°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 45·6°. On Friday the screened thermometers rose to 58·8°; on Saturday they fell to 34·9°. The prevalent wind was S.W. Rain fell on six days to the amount of 1·366 inches, ·890 inch being registered on Friday.

During the week ended Saturday, the 23rd, the weather remained changeable, dull, open, and rainy, particularly on the east coast of Ireland. Sunday, no doubt, was a fine, even bright day, but the setting in, on Monday, of a decided southerly current of warm, moist air along the western face of a large anticyclone over the Continent brought dull skies and heavy frequent rainfalls to Ireland and the western half of Great Britain. In the east and south-east of England conditions were more favourable, and the weather, while dull, was comparatively dry. On Sunday morning the centre of a deep depression was found off the N.W. of Norway, where the barometer was below 28·70 inches—on the other hand, pressure exceeded 30·30 inches over Southern Germany, the S.E. of France and Italy. Strong S.W. and W. gales blew in Scandinavia, but the wind was moderating in the British Islands, with a quickly falling temperature. Early on Monday frost occurred over central England. The area of high pressure meanwhile moved northwards and developed, so that by Thursday the barometer rose above 30·70 inches in Sweden. A low pressure area at the same time arrived off the S.W. of Ireland, causing strong S.E. winds, gloom, and rain in this country. On Friday a complete reversal of these conditions took place—the barometer became high off the West of Ireland, and a complex depression passed southwards across the North Sea. The result was the setting in of northerly winds, with drier and colder weather in Ireland, but with falls of cold rain, sleet and hail in the sister country. In Dublin the mean height of the barometer was 30·026 inches, pressure ranging from 29·665 inches at 9 a.m. of Wednesday (wind, S.E.) to 30·337 inches at 9 p.m. of Saturday (wind, E.N.E.). The mean temperature was 47·5°. The mean dry bulb reading at 9 a.m. and 9 p.m. was 46·4°. On Thursday the screened thermometer rose to 55·6°; on Monday the minimum was 37·0°. Rain fell on five days to the amount of ·671 inch, ·270 inch being measured on Tuesday. The prevailing wind was S.S.E.

Except at the beginning of the week ended Saturday the 30th, when a brisk east wind was blowing, and at its close, when the wind was westerly, the weather was overcast and gloomy. Thursday and Friday were, in addition, very wet, damp days, with extreme thickness of the atmosphere. During the first three days of the period an anticyclone lay upon the North Sea between Scotland and Norway, while extensive areas of low pressure were found both over the extreme North of Europe and in the Mediterrancan Basin and over the Peninsula. Strong westerly winds consequently prevailed in the far North, still stronger easterly and north-easterly winds in the South, while the atmosphere was calm in Scotland, and over the South of Scandinavia. Sharp cold prevailed at this time in the N.E. of Scotland—the thermometer falling at Nairn to 23° on Tuesday morning, but the weather was generally open in the British Isles. In Germany severe frost was felt—the minima at Munich being 21°, 22°, 27°, 19°, 19°, 25°, and 30°; at Berlin, 27°, 28°, 25°, 25°, 27°, 19°, and 16°. On the east coast of Ireland temperature was some 4° higher than at Holyhead during the easterly winds of the earlier part of the week. On Thursday, however, temperature became higher very generally, but rain at the same time set in, and a murky sky and extremely damp air lasted until Saturday, when the sky cleared with a bracing W. wind. In

Printed image digitised by the University of Southampton Library Digitisation Unit

Duhlin the mean height of the barometer was 29·999 inches, pres[illegible] ure ran[illegible]ng from 30·447 [illegible]nches at 9 p.m. of Sunday (wind, E.) to 29·600 inches at 9 a.m. of Friday (wind, N.E. The mean temperature was 46·4°. The mean dry hulb temperature at 9 a.m. and [illegible]m. was 45·9°. On Wednesday the screened thermometers fell to 41·7°, on Friday they rose to 56·0°. Rain fell on three days to the amount of ·467 inch, ·270 inch being registered on Thursday. Easterly winds prevailed until Saturday. The range of temperature was small—only 9·1°.

The rainfall in Dublin during the eleven months ending November 30th amounted to 27·298 inches on 167 days, compared with 15·378 inches on 141 days during the same period in 1887, 25·768 inches on 173 days in 1888, 25·718 inches on 178 days in 1889, 25·706 inches on 189 days in 1890, 24·521 inches on 163 days in 1891, 24·849 inches on 186 days in 1892, 18·011 inches on 155 days in 1893, 27·750 inches on 191 days in 1894, and a twenty-five years' average of 25·292 inches on 177·4 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in November, 1895, was 5·445 inches distributed over 20 days. Of this quantity 1·140 inches fell on the 15th, ·680 inch on the 5th, and ·655 inch on the 19th. From January 1st, 1895, up to November 30th, rain fell at that station on 151 days, and to the total amount of 31·715 inches. The corresponding figures for 1893 were 19·586 inches on 150 days, and for 1894, 35·716 inches on 168 days.

At Cloneevin, Killiney, Co. Duhlin, 4·43 inches of rain fell on 20 days, compared with a ten years' average of 2·066 inches on 15·7 days. The maximal fall in 24 hours was 1·01 inches on the 15th. Since January 1st, 1895, 28·66 inches of rain have fallen at this station on 163 days.

DECEMBER.—A gloomy, wet, stormy, and generally inclement month. Fog also was often, observed—the cold vapour fog of the 21st heing especially noteworthy. Christmas week is memorable for a long continued south-easterly gale in Ireland, and downpours of rain in the south-east and south—at Roche's Point the rainfall measurement was 7 inches in the seven days ending 8 a.m. of Saturday, the 28th. A remarkable wave of warmth was passing over the extreme west of Europe at the close of the month.

In Dublin the arithmetical mean temperature (41·6°) was slightly above the average (41·3°); the mean dry hulb readings at 9 a.m. and 9 p.m. were 41·0°. In the thirty years ending with 1894, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8°), and warmest in 1865 (M. T. = 46·2°). In 1886 the M. T. was as low as 37·9°; in the year 1879 (the "cold year") it was also 37·9°. In 1887 the M. T. was 39·9°; in 1888 43·6°; in 1889 43·8°; in 1890 39·2°; in 1891, 43·0°; in 1892 39·6°; in 1893, 43·5°; and in 1894, 43·9°.

The mean height of the barometer was 29·723 inches, or 0·152 inch below the corrected average value for Decemher—namely, 29·875 inches. The mercury rose to 30·290 inches at 9 p.m. of the 27th, and fell to 28·844 inches at 9 p.m. of the 15th. The observed range of atmospheric pressure was, therefore. 1·446 inches—that is, a little less than one inch and a half.

The mean temperature deduced from daily readings of the dry bulb thermometer at 9 a.m. and 9 p.m. was 41·0°, or 5·1° helow the value for November, and 3·7° below that for October, 1895. Using the formula, *Mean Temp.* = *Min.* + (*max.*—*min.* × ·52), the value was 41·8°, or 0·3° above the average mean temperature for December, calculated in the same way, in the twenty-five years, 1865-89, inclusive (41·5°). The arithmetical mean of the maximal and minimal readings was 41·6°, compared with a twenty-five years' average of 41·3°. On the 30th the thermometer in the screen rose to 56·0°—wind, W.; on the 21st the temperature fell to 25·3°—wind, S.E. The minimum on the grass was 24·0° on the 8th. There were only 4 days of frost in the screen, and 10 days of frost on the grass.

The rainfall was 3·944 inches, distributed over as many as 27 days. The average rainfall for Decemher in the twenty-five years, 1865-89, was 2·404 inches, and the average number of rainy days was 16·9. Both rainfall, therefore, and rainy days were considerably ahove the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1872, 4·932 inches fell on as many as 24 days; and in 1868 (which was otherwise a fine and dry year) 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; and in 1871 only ·797 inch on 15 days. In 1885, only ·742 inch of rain was measured on hut 10 days, but in 1886 the rainfall was 3·348 inches on 21 days. In 1887 (the "dry year"), the rainfall was 1·223 inches on 19 days; in 1888, 2·911 inches on 17 days; in 1889, 1·554 inches on 15 days; in 1890, 1·856 inches on 11 days; in 1891, 3·299 inches on 21 days; in 1892, only ·795 inch on 10 days; in 1893, 2·482 inches on 19 days; and in 1894, 1·511 inches on 18 days.

Lunar halos appeared on the 30th and 31st; a solar halo on the 31st. High winds were noted on 15 days, and attained the force of a gale on 7 occasions—the 4th, 5th, 12th, 15th, 22nd, 24th, and 25th. The atmosphere was more or less foggy in Dublin on the 8th, 10th, 11th, 17th, 19th, 20th 21st, 27th, 29th, and 31st. Snow or sleet fell in Dublin on the 6th, 7th, 12th, 13th, 15th, 24th, 25th and 26th. Hail fell on the 3rd, 8th and 12th. Thunder was heard on the 12th. Lightning occurred on the 15th. Faint aurora was seen on the 7th.

The most striking episode of the week ended Saturday the 7th, was the passage across North-western and Northern Europe, in the interval hetween Wednesday and Saturday, of an atmospheric depression, near the centre of which the harometer fell to 28 inches or less, at a time when pressure exceeded 30·40 inches over the Peninsula. The first three days were changeahle, hut generally favourahle, with open weather and southwesterly or westerly winds. The harometer was low off the N. of Scotland and to the westward of Norway—29·50 inches on Sunday and Monday, 29 inches on Tuesday and Wednesday. During this time the barometer stood above 30 inches over France and Germany and was gradually rising in that region. Hence gradients hecame very steep over

Printed image digitised by the University of Southampton Library Digitisation Unit

the Br... British Isles ...arm... On Wednesday a still further reduction of pressure took place over th... the Norwegian Sea and North Sea. At 8 a.m. of Thursday the barometer read only 28·34 inches at Christia... ansund in Norway, whereas it stood as high as 30·43 inches at Biarritz and Lisbon, and 30·48 i... inches at Ponta Delgada in the Azores. On Friday morning the reading at Madrid was 30·50 i... inches. Violent westerly gales raged over the North of France, Germany, the British Isles, and Scandinavia. Temperature rose in the S.—to 56° at Roche's Point, in London, and at the North Foreland, and to 58° at Cambridge; it fell fast in the N., and squalls of hail and snow, with thunder and lightning, swept over Scotland. A snow storm of much intensity subsequently extended to Ireland and England accompanied hy lightning at many stations. On Thursday evening the barometer was down to 28 inches at Christiansund. In Dublin the mean atmospheric pressure was 29 801 inches, the range being from 29·486 inches at 9 a.m. of Friday (wind, W.), to 30 046 inches at 9 p.m. of Saturday (wind, W.N.W.). The corrected mean temperature was 44·4°. On Thursday the screened thermometers rose to 54·5°; on Saturday they fell to 31·0°. The mean dry bulh temperature at 9 a.m. and 9 p.m. was 43·0°. Rain fell on five days to the amount of ·363 inch, ·196 inch being measured on Friday. The greater part of this precipitation took place in the form of snow. Tbe prevailing wind was W.

Cyclonic conditions persisted throughout the week ended Saturday, the 14th, and the weather was of a very unsettled, changeahle type—the alternations in pressure and temperature being sudden and extreme. Rain or sleet and snow fell almost daily in varying quantities, and thunder and lightning occurred in several parts of the United Kingdom in tbe course of Thursday. The week hegan with a frost prevailing in the rear of the great atmospheric depression of the closing period of the previous week. In and about Dublin the ground was covered with snow on Sunday, but a rapid thaw set in as the day advanced, and by Monday morning the air was quite mild, with a new depression central of the North of Scotland. In Dublin the thermometer stood 16 degrees higher at 9 a.m. of Monday than at 9 a.m. of Sunday. Tuesday was cold but fair. At night temperature rose again in Ireland, but sharp frost occurred in England, the thermometer sinking to 25° in the screen at both Oxford and Cambridge. Wednesday was a fine day, but at night the barometer fell fast, as a deep depression reached the North of Ireland and West of Scotland. This disturbance caused S.W. to N.W. gales, heavy rainfalls followed by showers of hail and sleet or snow. It was accompanied hy thunder and lightning in some instances. In Dublin thunder was heard at 10 15 a.m. of Thursday. Friday was fine after some light snow showers, hut at night the haromeler again fell and temperature rose so that the thermometer stood 15·3° higher at 9 a.m. of Saturday than at 9 a.m. of Friday. The mean atmospheric pressure was, in Duhlin, 29·760 inches, the barometer ranging from 30·135 inches at 9 a m. of Sunday (wind, W.) to 29·166 inches about noon of Thursday (wind, W.S W.). The corrected mean temperature was 40·4°. The mean dry hulb reading at 9 a.m. and 9 p.m. was 40·1°. On Sunday the screened thermometers fell to 29·9°; on Saturday they rose to 55·0°. Rainfall amounted to ·476 inch on six days, ·277 inch being measured on Thursday. The prevailing wind was westerly.

During the week ended Saturday, the 21st, the weatber was changeable and cold—more steadily cold than in past weeks; but as uncertain as hefore with regard to atmospheric pressure, direction of the wind, and amount of cloud. On Sunday a large and deep depression was central over Ulster, Connaught, Leinster, and the Irish Sea, in which regions the barometer was below 29 inches. Temperature had risen fast in England, hut fallen equally quickly in Ireland, at 8 a.m. the thermometer read 51° in London and at Cambridge; at 9 a.m. it stood at 38° in Dublin, where cold rain was soon followed hy sleet and snow. Lightning was seen at night. At this time a high-pressure area (anticyclone) hegan to spread south-westwards over the North Sea and British Isles from the Baltic and Scandinavia, the result being that easterly and south-easterly winds set in on Tuesday, accompanied by fine, dry spells. In Dublin, however, showers fell on Tuesday evening and during Wednesday night, while Thursday proved gloomy and damp in the extreme at a time when a clear sky and sharp frost prevailed inland and in the S.W. of Ireland. At 8 a.m. of Thursday the thermometer was as low as 30° at Valentia Island and 28° at Parsonstown, the minima at these stations having been 27° and 26° respectively. On Friday an anticyclone of little intensity lay over Ireland, Scotland, and Wales. The air fell calm and a remarkahle reduction of temperature occurred in Dublin, attended by a dense vapour fog—hy 2 p.m. the thermometer in the screen had sunk below 32° and during the following night a minimum of 25·3° was recorded. At Parsonstown the minimum was 21°. On Saturday a S.E. wind, connected with a new depression in the far S. and S.W., caused a rise of temperature in this neighbourhood. In Dublin the mean atmospheric pressure was 29·588 inches, the lowest being 28·844 inches at 9 p.m. of Sunday (wind, W.S.W.); the highest, 30 059 inches at 9 a.m. of Friday (wind, W.N.W.). The corrected mean temperature was 38·0°. The mean dry bulb temperature at 9 a.m and 9 p m. was 37 1°. On Sunday the screened thermometers rose to 44 9°; on Saturday they fell to 25 3°. Westerly and easterly winds prevailed alternately. The rainfall was 538 inch on six days, ·196 inch being recorded on Sunday, and ·181 inch on Saturday.

Weather of the most inclement description was experienced during the week ended Saturday, the 28th, in the S., S.E., and E. of Ireland. Day after day was gloomy, stormy, wet, and cold, and only on Saturday, when the wind at length veered from E. and S.E. to S.W., did more genial conditions prevail. In Dublin the sun remained invisible until Saturday forenoon, when it shone brightly for a few short intervals with the coming of the S.W. wind. The cause of the bad weather was the persistence of an area of high atmospheric pressure (anticyclone) over the Scandinavian Peninsula and the northern half of the North Sea, while a very large and deep depression swayed hackwards and forwards off the extreme S.W. of Ireland. This distrihution of pressure caused very steep gradients

Printed image digitised by the University of Southampton Library Digitisation Unit

for S.E. winds, particularly in Ireland. Temperature was low ex
over Cornwall, and in the S. and S.W. of Ireland, the result being th along the W. coast of France,
along the line of commingling warm and cold-air currents, while the wi large quantities of rain fell
from S E. and E. in the same districts. At Roche's Point, Cork Harbour, th blew a fresh to whole gale
a.m. on Saturday were—1·25 inches, 1·40 inches, 1·80 inches, 0·80 inch, 1·20 inches, 0·10 inch, and daily rainfalls up to 8
0·45 inch—in all, 7·00 inches The gales were most severely felt in the E. and S.E. of Ireland,
where the coasts were strewed with wrecks and a lamentable loss of life occurred on Christmas
Eve. In Dublin the mean height of the barometer was 29·723 inches, pressure ranging between
29·295 inches at 3 p.m. of Tuesday (wind, E.S.E.) and 30·290 inches at 9 p.m. of Friday (wind, S.E.).
The corrected mean temperature was 40·9°. The mean dry bulb reading at 9 a.m. and 9 p.m. being
40·5°. On both Thursday and Friday the thermometer sank to 36·0° in the screen; on Saturday it
rose to 53·8°. Rain or sleet fell daily to the amount of 2·366 inches, ·618 inch being registered on
Sunday, ·444 inch on Monday, and ·855 inch on Tuesday. The prevalent wind was S.E.

The last three days of the month and of the year 1895 were singularly mild, but very changeable,
cloudy and showery or rainy. On Monday, the 30th, the thermometer rose to 56·0° in the
screen—the highest reading for the month. Lunar halos were seen on the 30th and 31st; a solar
halo appeared on the 31st.

The rainfall in Dublin during 1895 amounted to 31·242 inches on 194 days, compared with 29·261
inches on 209 days in 1894, only 20·493 inches on 174 days in 1893, 25·644 inches on 196 days
in 1892, 27·820 inches on 184 days in 1891, 27·562 inches on 200 days in 1890, 27·272 inches on 193
days in 1889, 28·679 inches on 190 days in 1888, 16·601 inches on 160 days in 1887, and a
wenty-five years' average of 27·696 inches on 194·3 days.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in December, 1895, was 3·420 inches,
distributed over 23 days Of this quantity ·450 inch fell on the 25th, and ·360 inch on the 24th.
From January 1st to December 31st, 1895, rain fell at Knockdolian on 174 days, and to the total
amount of 35·135 inches. The corresponding figures for 1893 were 22·526 inches on 170 days, and
for 1894, 38·776 inches on 184 days.

The rainfall at Cloneevin, Killiney, Co. Dublin, during December, 1895, was 4·19 inches on 27 days,
compared with a ten years' average (1885–94) of 2·066 inches on 14·7 days It was the wettest
December of eleven years; 1888 comes next, with 3·87 inches on 20 days. The maximum fall in 24
hours was ·96 inch on the 22nd. Mr. Robert O'Brien Furlong, M.A., Univ. Dub., reports that the
total fall for 1895 at Cloneevin was 32·85 inches on 190 days. This was 7·364 inches in excess of
the 10 years' average—viz., 25·486 inches, and is the highest recorded for 10 years—1885–94 The
next highest annual fall was 32·64 inches in 1894, on 196 days.

In 1895 rain (including snow on 14 days) fell on 190 days, the average being 176·7 days.

Remarks on the Rainfall in 1895 *and Abstracts of Meteorological Observations,* 1875–95, *see pages* 186–190.

[illegible] MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1895.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1895.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	Area in Statute Acres.	Population, 1891.	TOTAL			BIRTHS.				DEATHS.		Excess of Births over Deaths.
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births		Illegitimate Births.

NOTE.—The Registrars Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances.

The letter *W* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the mark of omission (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were in fact, *less than the deaths* to the extent stated.

The rainfall was 3·546 inches in excess of the average annual measurement of the twenty-five years, 1865–89, inclusive—viz., 27·696 inches.

It will be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches, the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell, in 1884, when the measurement was 20·467 inches, and in 1893 with its rainfall of 20·493 inches. In seven of the twenty-five years in question the rainfall was less than 26 inches, and in 1885 it was 26·614 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1886—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days.

In 1895, there were 194 rainy days, or days upon which not less than ·005 inch of rain (6ve thousandths of an inch) was measured. This was almost exactly equal to the average number of rainy days, which was 194·3 in the twenty-five years, 1865–89, inclusive. In 1868 and 1887—the warm dry years of recent times—the rainy days were only 160, and in 1870 they were only 145. In 1868, however, the rainfall amounted to 24·935 inches, or more than 8 inches above the measurement in 1887, and even in 1870, 20·859 inches were recorded.

The rainfall in 24 hours from 9 a.m. to 9 a.m. exceeded one inch on two occasions in 1892—viz., May 28th (2·056 inches), and August 16th (1·310 inches). On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894, falls of upwards of an inch of rain in 24 hours were recorded on four occasions, viz., May 15th (1·330 inches); July 24th (1·560 inches); August 25th (1·369 inches); and October 23rd (1·042 inches). In 1895, 1·802 inches fell on January 12th; 1·014 inches on July 24th; and 1·256 on July 25th.

Included in the 194 rainy days in 1895 are 38 on which snow or sleet fell, and 40 on which there was hail. In January hail was observed on 10 days, in February and also in March on 6 days, in April on 2 days, in May, July, and November on 1 day, in June on 2 days, in October on 8 days, and on 3 days in December. Snow or sleet fell on 13 days in January, on 7 days in February, on 4 days in March, on 1 day in April and also in May, on 3 days in October, on 1 day in November, and on 8 days in December. Thunder occurred on 10 occasions during the year—twice in May, three times in June, twice in July, and once in August, October, and December. Lightning was also seen on three occasions in October, and once in January, March, August, September, and December.

The rainfall in the first six months was 12·282 inches, on 80 days. The rainfall exceeded 3 inches in January (5·711), July (4·503), August (3·548), November (3·582), and December (3·944). In May it was only ·177 inch on 3 days.

Aurora borealis was observed on four occasions—namely, on March 13th, April 11th, May 2nd, and December 7th. More or less fog prevailed on 52 occasions—5 in January, 6 in February, 6 in March, 2 in May, 1 in August, 9 in September, 7 in October, 6 in November, and 10 in December. High winds were noted on 124 days—13 in January, 15 in February, 13 in March, 9 in April, 3 in May, 4 in June, 13 in July, 8 in August, 7 in September, 9 in October, 15 in November, and 15 in December. The high winds amounted to gales (force 7 or upwards according to the Beaufort scale) on 34 occasions—4 in January, 7 in February, 3 in March, 1 in May, 2 in July, 2 in September, 2 in October, 7 in November, and 7 in December.

The rainfall was distributed as follows:—9·084 inches fell on 52 days in the first quarter, 3·198 inches on 28 days in the second, 8·594 inches on 50 days in the third, 10·366 inches on 64 days in the fourth and last quarter.

NOTE.—This Table has been constructed for the years 1821 to 1831—By adopting the rates of increase of the male and female population between 1821 and 1831, as shown by the Irish Census Reports of 1831—the first complete Census of Ireland having been taken in 1821.

1832 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871 as explained for the last period.

1872-95—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872-81 and 1882-91 to allow for the discrepancy between the number thus arrived at for 1881 and 1891 respectively, and the population as shown by the Census in each of these years.

AGES of the POPULATION in IRELAND according to the Census Returns of 1861, 1871, 1881, and 1891.

Periods.	Sexes.	Ages—Years.														Total.

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 45 (*see* page 52), and in like manner the number of Births and Deaths, of Deaths of different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page or pages in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

PROSECUTIONS for OFFENCES against the REGISTRATION ACTS during the Financial Year 1895–96.

The total number of offences against the Registration Acts which were reported by Local Officers, and came under investigation in the General Register Office, during the year ended 31st March, 1896, amounted to 617. As regards many of these, the defaulters came forward and complied with the requirements of the law, on becoming aware that proceedings against them were in contemplation, and in a large number of cases it was found that no proceedings could be taken against the responsible parties, as the legal time for doing so had elapsed.

However, after careful inquiry into the circumstances of each case, and an examination of the evidence available, prosecutions were directed against the offenders in 155 cases. In 81 of these the parties were convicted and punished; in 69 cases the proceedings were abandoned, the parties (in most cases) paying the costs of court and complying with the law; and in 4 cases the summonses were dismissed, while in 1 case the result has not as yet been reported to the Registrar-General.

Among the offences dealt with were the following:—Neglect to register births; neglect to register deaths; neglect to furnish certificates of marriage; failure of Coroner to furnish certificate of inquest; giving false information as to age at death, as to the cause of death, and as to duration of illness previous to death; giving false information as to births, viz., registering illegitimate children as legitimate, and misrepresenting date of birth; neglect of Medical Practitioner to furnish certificate of cause of death; falsifying extracts from Registers.

The following are a few examples of these cases:—

J. F. was prosecuted at Listowel Petty Sessions for neglecting to register the birth of his child. He was convicted and fined 20s. and costs.

A. H. was prosecuted at Golden Petty Sessions for similar neglect. He was convicted and fined £1 and £1 costs.

J. D. was prosecuted at Kesh Petty Sessions for neglecting to furnish to the Registrar a certificate of his marriage. He was convicted and fined £1 1s. and costs.

M. B. was prosecuted at Eyrecourt Petty Sessions for registering the birth of her illegitimate child as legitimate. She was convicted and fined £1 and £1 costs.

M. H. was prosecuted at Lisburn Petty Sessions for registering an illegitimate birth as legitimate. She was convicted and fined £1 and costs, or one month's imprisonment.

T. R. was prosecuted at Borris Petty Sessions for giving false information when registering the birth of his child. He was convicted and fined £3 with £1 costs.

It is to be regretted that, despite the measures adopted by the Department for the punishment of offenders, several Registrars report that they believe false information is frequently given to them, especially in cases of deaths.

The *modus operandi* in one class of offences appears to be as follows: when a member of a family is entered in a Friendly Society or Industrial Assurance Company, the age is frequently given as much below the real age in order to reduce the amount of the premium payable. After a time the person dies, and then the registry is effected so as to suit the statements previously made to the Society or Company.

However, it sometimes happens that the informant overlooks the fact that the age in the register should correspond with the age in the policy, and, in order to obtain the money, another criminal act is then necessary, namely, making a declaration before a magistrate, altering the age correctly given in the register to an incorrect age, to agree with the age in the policy.

Although the greatest pains have been taken to obtain evidance in these cases to convict the offenders, it is to be regretted that on many occasions the proceedings had to be abandoned for want of documentary proof of age, though no reasonable doubt existed that the offence had been committed.

Pnnted image digitised by the University of Southampton Library Digitisation Unit

In several cases the age of a deceased person has been successfully proved from a marriage register, giving the age at time of marriage, and in other cases the age inserted or proposed to be inserted in the register, has been proved to be impossible from the records of the births or baptisms of the children of the deceased; but of course, as a rule, the absence of reliable records of birth or baptism of old persons, makes it exceedingly difficult to deal with cases affecting them.

In addition to the above mentioned, there were a number of cases during the year in which proceedings were taken under the 26 & 27 Vic., cap. 90, before the magistrates at Petty Sessions for corrections in marriage registers, the summonses in these cases being issued at the instance of local Registration Officers.

A sum of £130 was provided in the estimate to meet legal charges. The total cost of the legal service of the Department during the year was £117 0*s.* 0*d.*, of which sum £80 9*s.* 10*d.* was paid for local professional assistance, and £25 8*s.* 0*d.* for mileage to the Registrars.
